Terrorism fails to shake UN out of its lethargy

Millio Ciali Maria

Whether terrorism has lost a battle rather than a decisive campaign in Mogadishu is a question which presents itself in a different light in Bonn than it daes at the UN in New York.

It is perfectly understandable that, after the upheavais of the past few days, great hopes were pinned on the United Nations whose members — one would think — only need to act in concert in arder to prevent similar disasters in future.

But how much the perspectives differ has become obvious by the manner in which the news of events surrounding this latest chapter in the history of terrorism were received and assessed.

Initially, the hijacking of the Lufthansa jet falled to arouse interest, which was not forthcoming until the hijackers killed the captain. The whole in-

faat firmly on the ground Blumman and a statement and a statem

sensation until the rescue mission mounted by Bonn was successfully completed.

The severe set-backs that followed this victory — the brutal killing of Hanns-Martin Schleyer and the suicida of the three imprisoned terrorists — on the other hand, were swiftly supplanted at the seat of tha United Nationa... There is, after ail, nothing unusual about the loss of human lives.

If diplomatic circles at the UN were troubled at all by any consequances of the Mogadishu raid, then certainly not by these fatalities but by the threatened strike of the international pilots' organisation.

It so happans that participation in intemational air traffic is one of the statue symbols of a sovereign state — a status symbol no country wants to forgo, even if it could do so.

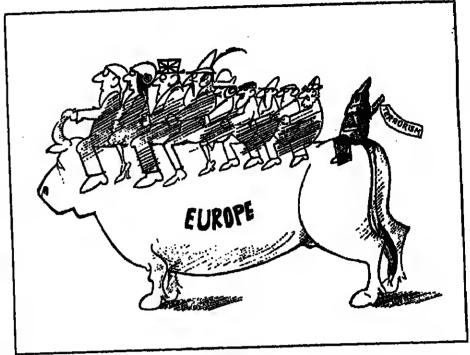

But even this very powerful lever of a threatened pilots' strike which was intended to rouse the UN from IIs lethargy and induce it to close ranks in instituting concrete measures to combat air piracy seems doomed to proving ineffectual.

Even UN Sccretary General Kurt Waldheim seems to have laboured under the delusion that the Mogadishu incident would teach the UN a lesson. He stuck his neck out rather more boldly than usual in calling on the UN to deal swiftly with a draft for a convention against hostage-taking — a convention first introduced in the debate a year ago by Bonn.

If all member nations were to accept this draft and abide by it, hostage taking as a means of extortion could become a think of the past.

Bonn proposed, among other things, that all signatories of the convention put hijackers on trial and that sentences be still indeed. This would also mean that hijackers could no longer seek refuge in another country. Moreover, it would meet the pilots' demands for greater flight safety — as a byproduct so to speak.

But, curiously enough, not even Bonn's ambassador to the UN seems to show any great interest in taking his

Tha stowaway

(Cartoon: Hanel/Kölner Stadl-Anzelger)

country's motion out of the slow moving mills of the UN procedural machinery, thus enabling it to be pushed through more swiftly.

Bonn's ambassador to the UN lears that the carefully worked out draft - lf it were to be thrown into the debote at this timely moment - would meet with defeat due to the sympathy which the terrorists still enjoy in some Arab countries

Bonn intends to let the draft take its course through established UN channels.

At this stage, the government of the Federal Republic of Germany would be satisfied if the UN were to pass an appeal (tabled by Austria) calling on all governments to improve air traffic safety.

It is possible that political incitics demand that Bonn proceed in exactly this way. But even so, the fact that even the events of the most recent past cannot induce the UN to abandon its plodding pace is enough to make anyone deson. H. W. Kettenbach

(Kölner Stadt-Anzeiger, 22 October 1977)

European terrorism convention is hardly the right example for UN

More than a year ago at the United Nations General Assembly, the Bonn government introduced a draft proposal for a convention against the takiog of hostages. The was shortly after a French passenger plane had been hljacked en routa to Athens and been forced to land in Entebbe, where it was stormed and its passengers freed by Israeli commandoes.

The Bonn government hoped that this incident would make the UN delegates more prepared to listen to its proposals. The response at the time was not entirely negative — not even from those ndtions who were more indignant about the violation of Ugandan territorial aovereignty than the hijacking itself.

But the United Nations has donc nothing during the past year to bring about international agreements which might deter terrorists from their criminal acts.

After the freeing of the hostages on the Lufthansa jet in Mogadishu, the government believes that the present United Nations General Assemily is more likely to give a favourable hearing

to its proposals. In his recent government statement the Chancellor expressed the hope that the convention would be given immediate consideration and passed.

This optimism is surprising in view of experience with the much-vaunted terrorism convention signed in the European Council in Isnuary. This has so far been ratified and become law in only three signatory states; furthermore, 12 signatories felt it necessary to put in "notes for the record" to prevent the entire package from becoming completely ineffective as a result of French reservations in particular.

The questions of extradition, legal aid, political asylum and terrorists' political motivation played a decisive part in the fonnuiation of the convention.

Norway and Italy, for example, have reserved the right to look at each case on its ments and then mske a docision; they have only committed themselves to taking legal action themselves if they do not extradite terrorists. Portugal does not extradite to countries which still have choital punishment.

France is now putting forward reservations with the aim of reducing its obligations according to the convention to a minimum and allowing itself maximum scope for opportunistic considerations.

In short, Paris wishes to decida for itself whether the motives for a crime are terrorist, crimnal or potitical and whether or not to grant political asylum.

Paris also wishes to decide whether a political motive is in accordance with the interests of the French state or not. France is extremely circumspect in ber relations with Arab states and would not welcome foreign interference in the question of whether or not to extradite Arab terrorists and thereby damage her relations with these countries.

It is difficult cnough already in the relatively homogenaous cultural and social area of Western Europe to agree on binding descriptions of crimes and motives. How much more difficult is it going to be in the United Nations, where the Third World has its own view of this matter, which is very different from our own.

Bonn has, wiscly, only proposed a convention against the taking of hostages, but this will not prevent a renewal of the Geneva Confarence dispute on the difference in international law between terrorism and freedom fighting. Josef Riedmiller

Some issues remain unresolved after Genscher's Peking visit

THE GERMAN TRIBUNE

G				di ta pin
California Contract			1997 - 1997 -	2: A 8: -
	- 0 K	INTA	(78 :	62.
	T	TATT		
		LAP		S

Foreign Minister Hans Dictrich Genscher's recent visit to Peking marked five years of full diplomatic relations between China and this country.

Herr Genscher was eccompanied by a party of more than ninety, but the mood at tha end of his visit was not celebratory. His political talks with the Chinese leadership only served to underline how norrow the acope for cooperation between the two countries is on the bilateral and the international level.

This high level German-Chinese mecting seconed dispassionate and reserved in comparison with the assurances of mutual sympathy end interest that characterised the three-wee-week fact finding tour by CDU defence spokesman Manfred Wörner.

His reception was similar to that given to other top CDU/CSU politicians such as Franz Josef Strauss and Gerhard Schröder on their visits to Peking. Here, too, Chinese warnings ebout the Soviet Union's policy of expansion fell on sympathetic ears.

The conflict between Peking and Moscow wes the main subject of discus-

M S

The decision on whether or not L Soviet Prealdent Brezhnev will be visiting Bonn this year or next will have to fall very soon. Relations between the Federel Republic of Germany and the Soviet Union have suffered some setbacks as of very recently, end these setbecks in conjunction with international developments necessitate some rethiak-

ing. The schedule for the Brezhnev visit is therefore subject to the question on both sides whether or not it is meaningful to arrange e summit et the earliest possible date, thus getting some action concerning the problems on hand, or whether it might be better to prepare the visit still more thoroughly. The final decision will have to be reached in the first half of November.

With regard to the three still open treaties which are to settle the inclusion of West Berlin, no progress has been mede so far. On the contrery Soviet criticism of Bonn's West Berlin policy and above all of Foreign Minister Genscher has become even more eccentueted."

This is borne out by a recently pablished article in the magazine Novoye Vreniva.

The article says, among other things: "It must unfortunately be said that the Federal Government is locking for grey zones in the Four Power Agreement in order to create precedonta by means of unilaterel actions - precedents aimed at changing the balance of interests,".....

The article then goes on to say that the opinion prevails in the Foderal Re-public of Germany that even today Bonn can still act in the same manner regarding West Berlin as it did prior to the Four Power Agreement. This puts it very bluntiy.

about the Bonn government's policy of detente. The Peking leaders revealed aensshonal defence plans to them which had previously been kept secret from all foreigners. Given the convergence of 'their views on the international political altuation, It was hardly surprising that Teng-Hsiao-ping, Chou En-lai's political heir, should choose to reveal his plans for a common front between China, the USA, Japan and Western Europe against Soviet Union to opposition politithe cian Wömer rather than to Foreign Miniater Genscher.

> The Chinese attacks on Soviet imperialism must have appeared, in Genscher's eyes, to be pure provocation and a thinly disguisced attack on the present coalition's coacept of detente.

At the first reception in the Hall of the People, deputy Prime Minister Li Hsien-nien bluntly underlined the fundamental difference between the premises on which Chinese foreign policy and Nato'a foreign policy were based. He condemned what he called Moscow's "phases of datente" as Foreign Minister Huang Hua had dona at the UN, accusing tha Soviet Union of speaking with a "forked tongue" and of having plans for unlimited expansion in Europe, Asia and Africa. This was, of course, an implicit criticism of Western

sions between the Chinese and these attitudes to detente as illusory and un-

Herr Genacher stated afterwarda that ha had explained, in his talka with Lu, Huang, and Chinese party leader Hua Kuo-feng that the Federal Republic of Germany'a special geo-political situation made e policy of detents and of strength within the West European Alliance necessary and that they understood the German position. This assurance did not sound very convincing in the circumstances.

Given this fundamental difference of principle in the anelysis of the international aituation, it is hardly aurprising that the Chinese gave the cold shoulder to Herr Genscher's proposals for joint German-Chinese cooperation and aupport for the independence of the South East Asian states.

The Chinese have for some time been following Germany's development policies with benevolent interest, but a common Asla policy alde by side with Bonn is unacceptable to them for two reasons: first, Herr Genscher'a formula of "anti-influence zones" is too vague for their liking and not sufficiently anti-Soviet in tone and, accordly, Peking is not interested in de facto or de jure alliances, but only in limited cooperation Jürgen Kahl with the West.

(Deutsches Allgomeines Sonnlegsblail, 23 October 1977)

Brezhnev's Bonn visit this year remains uncertain

But in the economic sphere, too, there is new ballast to be jettisoned. The Kursk ateel works deal, which was confirmed by the then Chancellor Brandt and Brezhnev in Bonn in 1973, is in danger of being eroded by factual developments. Many Soviet requests for changes and modernisation, together with generel price increases in industry, have made the German participation rise

from about DM6,000 million to close to DM20.000 million.

It has long since become obvious that, in view of this state of affairs, the Kursk project will have to be reduced in magtiltude

The Soviets had agreed to pay cash for the first phase of the project. But es things stand now it remains open whether dr not the Soviet Union will embark on an entirely new orientation towards other Westem nations end depend on its own resources, thus considerably reducing the share of the Federal Republic

of Germeny. But even earlier, the intentioa announced by Chanceltor Schmidt; during his last Moscowi visit, to erect a joint power station in East: Prussia, intended to supply the Federal Republic of Ger-

many and West Berlin, wes ahelved for political and finencial reasons.

Western business representatives in Moscow have latterly observed the trend on the pert of the Soviet Unlon to shift orders from the Federal Republic of Germany to France. Moreover, treda relations have become more complicated due to extremely hard terms concerning prices and an increasing incidence of Soviet demands for barter deala.

Initially, the Mutual Balanced Forces Reduction (MBFR) was supposed to be the central issue of the Bonn summit. which the two countries wanted to taskle despite the fact that US-Soviet Salt negotiations were meking no progress. :

But the recent favourable developments concerning Salt, have changed the situation.

It would seem more logical at present if Bonn and Moscow were to engage, in MBFR talks once the Salt issue becomes clearer, since the present state of negotiations there could soon lead to a breakthrough.

And finally, the atmosphere created by the Soviet press is not exactly con-ducive to preparing a state visit. The Sovlet press, when writing on terrorist activitles, is constantly pointing to dangers from the right and to suppression of laftist forces in the Federal Republic of Germeny. Heinz Lathe

(Kleier Nachrichten; 24 October 1977)

Bonn takes a. firm stand

30 October 1977 - No. 81

DIE WELT

Bonn Foreign Minister Hans Ditta Genscher has atated the sec ment'a ettitude towards South Afric recent severe clainpdown on chias Its apartheid policy.

The statament reads as folm "The German govarnment has ke with consternation, of the Sol government's decision) African declara 18 pradominactly organisations illegal, the ban on the newspapers, including the main main piece of the black population and a arrest of aeveral journalists. The g Germany appeals to the South Ma government to rescind these mean which could have serious consequer immediately and to grant elemen human rights to the majority of the pulation"

News had previoulsy come through Iohannesburg of more strests. One d those arrested is black Lutheran Bish; Manas Buthelezi. Soweto, near Johanne burg, is in the diocese of this bake who atudied in Germany. For over 1 year now, Soweto has been the scene d violent riots which have cost 500 lives.

Pretoria's Minister of Justice Kra justified his action by stating that and important for the government to the that peaceful co-existence among these of South Africe should not be distriby a small group of anarchin He also announced that he would be further mesures if this should prove the CESSORY.

The government's action has come for severe criticiam both in South Alia and obroad. Hodding Carter, spokesme of the US State Department read statement which, he ssid, had been 4 proved by President Jimmy Carter, The atatement asid that "Washington wor examine very closely the aignificance these events for relations between Soul Africa end the Uniled States,"

The 18th October was the day on I which the Germans first fully Identified with and committed themselves to their democretic society. This commitment and identification had long been present on the intellectual plane. The motional identification was not yet complete, but the events of this day completed It.

First there was the shock and horror of the Schleyer kldnapping, the weeks of uncertainty and waiting. Than came tha hijacking of the Lufthausa jet with 87 holidaymakers and crew aboard.

The reaction was a feeling of utter helpicssness and compassion with the victims. The insane Odyssey of the gangsters and their hostages from the Balearics to the coast of Somslia evoked responses capable of turning in any direction.

These feelings reached their climax on 17 october in the evening, with the moving pilgrimage of the hostage's relatives to the crisis staff headquarters "Herr Chancellor, I want my Mum back," read one poster. Tha churches called upon their members to pray for the hostages of 18.00 hours on Tuesday. and the Pope offered himself as a hostage in their place - an unprecedented set. It seemed that the limit of the tolerable had been reached.

The party leaders, with Chancellor Helmut Schmidt at their head, had also reached the limits of endurance. The crisis staff was presided over by the chanceltor, whose terseness and strength of nerves won admiretion on all sides. The members were encouraged in all their deliberations during these weeks of crisis by the awareness that there was complete unsnimity among them end that the majority of the people supported their hard line.

A snap poil by the Allensbach institute on Monday evening, however, showed how the mood of the people had changed. Forty two per cent were against the release of tha Baadar/Meinhof prisoners in exchange for the hostages, and forty two per cent were in fayour - the rest had not made up their minds. The decision in Bonn had elready been made, and hours later it achieved what neither the cost reduction law nor the economic packages had succeeded in doing: complete ideatity between

Continued from page 2

UN committee against apartheld, called on westem states to give up their "ambivalent attitude" towards South Africa, and join the the "defence of freedom" in that country.

The conservative government orientsted South African newspaper "The Ci-tizen" regreted the banning of the two newspapers, saying that "two lights of press freedom have gone out with them". Members of the African National Congress In London described the government's move as "aa act of desperation by the whithe inioonity."

: (Die Welt, 21 October 1977)

the will of the people and the action of the executive branch.

It is clear that the courageous reld by the GSG 9 unit was one of those milltary or paramilitary ventures which had to aucceed if it was not to be condemned by history. The political leadership of this country had no real alternstive. The plan put forward in some CSU circles of exchanging prisoners for hostages and then declaring a state of emergency was not realistic.

The Federel Constitutional Court had been called upon by Herr Schlayer's familly to force the government to accept the terrorists' terms for his release, but li had to turn down this understandable request and rule in favour of the executive in accordance with its duty.

The victory won by this country was not achieved by out and out gemblere but by cool heads who had weighed the risks carefully before acting. Even a democracy is capable of defending itself in an emergency. This is something Hitler failed to realise in 1940 and Stalin falled to realise later.

However, the national and international terrorist cadres have either ignored or not sufficiently realised this fact. There is a weak link in their offensive position. The collective suicide of three members of the Baader/Mcinhof-hard core who were to be released indicates not only resignation at the failure of the "big spring" job. It also underlines that the founding fathers of this jeans and puberty largon no tonger had any hope of seeing the revolution they hoped would result from the countless demonstrations of the past. Loss of contact with reality has always been indi-

Chancellor Halmut Schmidt (right) and Foraign Minister Hans-Dietrich Genscher thanking Samalla's Ambassador Yusuf Adan Bokah for his country's support in freeing (Pholo: dos) Lufthense hostages in Magadishu

cated by alicnation from the language of the masses.

We will probably have to go on living with the fear that these neurotics will start a new wave of terror in their urge to affirm thenisolves. It will be senseless, futile and will not have the remotest chance of success.

One wonders how the so-called "scene", which has been silent in the past few days will react to all this. It is a fact that the reaction of the goveniment reflects the will of the vast majority of the population, but the question remains: how is the generation gap to be closed?

The university campuses have surprises in store for us in the coming academic year. This is a fact that has been forgotten in the euphoria of the frecing of the Lufthansa jet. But there is tune now to predict and preparc for what is to come.

There is time to point out the fun-

damental futility of it all. This nation would tather go into the resistance than accept the language, gestures and modes of thinking of left wing romanticism.

Professor Marcuse's theory that an intellectual minority rather than a conformist working class would form the battering ram of the revolution is unrealistic and as good as forgotten. In this respect, the 18th of October was a historic date.

In the meantime, this country's police is bemoaning the fact that only 25 per cent of their wanted posters have been put up in shop windows. "In the opinion of high ranking officials, the terrorists are now convinced that they have succeeded in creating the impression that it is more dangerous to work for than to work against the stote." This is it. There is not - yct - any cause for self congratulation. Eberhard Maseberg

(Deutsches Allgemeines Sonntagsblatt, 23 October 1977)

Troubled times bring unity across party lines

socialist state of Somalia, was last week applauded for severel minutes by the members of the German Bundestag. It was a scene that, e few days earlier, he would hardly have dreamt possible. Even tha Christian Democrats joined in tha applause for the representative of Somallan President General Barre, who had given permission for the German Border Polica unit to storm the Lufthensa jet at Mogadishu and free the hostages. Even those members of the opposition who had been demanding thet the government stop giving development ald to countries that coopereted with the Soviet

Union joined in the ovetion. Yusuf Adan Bakah stood up and bowed his head for a moment es an expression of thanks: The Chancellor applauded from the spenkar's desk of the Bundestag - something that has never happened before. Chancellor Schmidt assured the Somali ainbassador: "We will never forget this; it will certainly have on effect on our relations in future" referring to the Somalian cooperation in the freeing of the hostages. Bundestag President Karl Carstens thanked the embassador in the name of the entire Parllament.

Then Chancellor Schmidt made a blb-

Vusuf Adan Bakah, ambassador of the lical comparison: "Our black brother was the Good Samaritan who rescued the whites who had fallen among thieves from their misery."

Politically, this meant that the Somalisns "whom many in this country have criticised or rejected because they have chosen e different form for their society" had abown solidarity. The speech was then translated for the Somalian, ambasssdor by the chief of protocol.

.This first full session of the Bundestog after the freeing of the hostages in Mogadishu and the murder of Hanns-Martin Schleyer in Alsace was not the first time that the members of all parties had joined ranks to express a feeling that they ell ahared. Usually, the line of islon between the government camp and the opposition is clearly defined. Last weck, this line could no longer be. seen. 100.00

The terrorists' threat of revenge has brought government and opposition even closer together than I hey had been in the preceding daya. Helmut Schmidt' is the "Chancellor of the crisis team." Two days previously, when he had a brief respite after the freeing of the Mogadishu hostages, he told journelists ia a press conferance with British Prime

Minister James Callaghan that the expression "big crisis staff" should not be used in future, because it was in fact a "staff of advisers." And in the Bundestag he said: "I would like to thank the members of the various crisis staffs." This was greeted with applause from the entire Bundestag.

Opposition leader Helmut Kohl is jointly responsible for the victory in Mogadishu as well os for the defeat in Mulhouse. He egrees with Helmut Schmidt in his appeal that "some of the solidarity of the past few weeks" should be preserved for the future, considering this to be the duty of the entire Bundes-

The terrorists have thwarted opposition plans to launch an autumn offensive signification the government. Helmut Kolil will continue to give the Chancellor full support even after last week's session of Parliement. Kohl wes there when Schmidt presented the GSG 9 men with the Federal Order of Merit. Wearing their olive green uniform and berets instead of jeans this time, the men shook hands first with the Chanccilor than with the leader of the opposition es they were presented with their awards. A lot will depend on this unit in the future.

As Herbert Wehner put it in the Bundestag: the whole nation had been through a harrowing experience. "And os far os we can see, there is even worse to Udo Bergdoll come,"

(Saideutscho Zeitung, 21 October 1977)

CONGRESSES Printers' union becomes edgy as technology threatens jobs

und Pepler (printers' union) confirmed tha union's chairman Leonhard Mahiain, 56, in office. Mahlain, who has headed tha union since 1966, recaived 197 of the dalagates' 265 votes. The editor Detiev Hanacha was elacted as prasident of the axegutive board with 203 of 265 votes. The deputy chairman Erwin Farlamann recaived 191 of 265 votas.

The printers' union, once the proud L avant garde of German trade unions, has fallen prey to a virus of consumption. it has become nervous and littary and is trying to fight suffocating

The delegates at the recent conference in Augsburg were visibly worried about the effects of the technological revolution in the printing business. Typesetters, proof readers etc. have to put up with the bitter realisation that they are gradually coming under the wheels of progress as lead is replaced by sophisticated electronics. But editors, too, hava nothing to rejoice about.

Concern about their future livelihood has mada these people receptive for radical theses. It is therefore not surprising that the union's chairman Leonhard Mahlein and his eloquent second-incommand Detley Hensche were applauded when they called for the nationalisation of key industries such as major banka and monopolistic concerns. After all, it would have been unrealistic lo expect of a shrinking trade that it engage in eulogies about a free market economy.

The printers' union is still labouring under the high indebtedness resulting from last year's strike - an indebtedness which will take many years to wipe out. Lack of circumspection on both sides drove labour and management into a conflict situation which continues to smoulder. There was an undertone of desperation discernible in Mahlein's call on the Deutscher Gewerkschaftsbund. DGB, the German Trade Unions Federation, demanding more solidarity.

Mahlein's position is precarious. His union intends to press business into e contract which wilt bring about not only new internal codetermination arrangements but will above all put the brakes on structural changes through technology.

Q

Ċ,

24

The printers want to prevent editors working on computers from - on top of their own jobs - also taking on the functions of typesetters and proof readers. They demand that such functions must remain with the specialised people in the printing industry and they would to fight It out if only the strike coffers were not empty.

Newspaper and magazine publishers have so far either remained intransigent. or have been stalling.

But they put their foot in and truly angered the union when, prompted by an allegedly unconstitutional motion at the Augsburg congress, they refused to engage in any further talks, demanding that the motion be withdrawn if any parleying is to be resumed.

The whole thing goes back to an appeal by Chancellor Helmut Schmidt

The aleventh congress of the /G Druck in his government policy atatement of December 1976, calling on tha parties in collective bargaining to find a solution to the problem of the Internal treedom of the press on a basis of consensus. Unless they did so within threa years, sald Herr Schmidt, the legislativa branch would have to intervene.

> In order to counter such a contingency, the union has now worked out a list demands which, to say tha least, shocked tha publishers and which is also controversial among journalists.

According to the union's idess, all newspaper and magazine publishers should have an editorial committee which will have a say in all matters on s codctermination basis and in which the works' council would be represented. They also call for the suspension of the Tendenzschutz legislation (whereby edltors and journalists who have an effect on the publication's political or ideological viewpoint are exempted from certain provisions with regard to hiring and firing).

They furthermore damand that no publisher must be permitted to be editor-in-chief. And in order to prevent further trust formations in the press, they want advertising to be subjected to communal controls.

t the very beginning of the German A Trial Lawyera' Association congress in Bonn, the Association's chairman, Dr Erich Schmidt-Leichner, said: "We are aware that the legal profession and above all trial lawyers have come under a cloud"

He thus made it clear from the very outset where the shoe pinches his 31,000 colleagues in this country.

Ever since some defence counsellors for the terrorists acted as accessories to their clients, the image of trial lawyars in the Federal Republic of Germany has suffered

It was tharefore the prime purpose of the Bonn congress to assure the public that the lawyers themselves suffer most from the few black sheep in their midst.

As Dr Schmidt-Leichner put It: "Trial lawyers as a whole have integrity and are beyond reproach. They consider themselves bound by the Constitution and are loval to our constitutional democracy. in fighting for justice and for the rights of their clients they will never become their accomplices. All those who hamper the course of justice or indeed act in collusion with their clients do not belong in our ranks."

But this is easler sald than done. Among the participants in Bonn were nawold from Hamburg and Strübeie from Berlin.

The Trial Lawyers' Association, which is also a work group of the German Bar Association, is reluctant to expel these men. Says Bar Sesociation administrator Dr Brangsch: "As long as a person is admitted to the Bar he also has tha right to be a member of our association."

In fact, lawyers bemoan the fact that the black sheep among them are not stripped of their right to plead in court quickly enough. But on the other hand, the Bar Association itself is not exactly request of the public prosecutor. In

if there is no other way to put an end to the lrust formation process, concerns dominating the market are to ba nationalised, say the unionists. But do they really consider such a move only as a last resort? If so. why do they - in a different context state that "the actual dangers for the freedom of the press today lie in our free market economy based on private ownership"?

This formulation is clearly attributable to Detley Hensche, the feisty lawyer who joined the printers' union, having previously worked for the DGB bead office where he was a member of the executive committee.

Hensche is obsessed with the idea that anybody who criticises, say, the speech of a union boss in tha privatalyowned press is a stooge of his publisher.

Himself an out-and-out political partisan and bent on class struggle, Herr Hensche is quick to condemn any articie that does not suit him as a violation of the public function of the press.

Ha takes it for granted that, while collective bargaining is in process, typesetters should have the right to refuse to print editoriais opposing or unsympathetic to the union unless they provida equal space for pro-union opinion.

anti-terrorism laws

quick to act. Only Klaus Croissant was

future, bowever. Bar Associations are to be given more letitude end be enabled to act on their own.

In view of the hijecking of the luithansa jet it was obvious that make involving terrorism and defence count iora for terronists were the focal pointd discussion. As a result other matters were releated to second place - amou them the question whether or point would be meaningful to introduce the new professional designation "Criminal Trial Lawyer".

Another topic of discussion was the ban on multiple defence by one lawyer. This means that, for example, in s could proceeding against 200 violetors of cant legislation it is necessary for 200 separate ewyera to appear. As Dr Brangsch putil "this is unadulterated nonsense. stressed that this ban should be lifted at least in cases involving disciplinary sotion and fines.

Some terrorist counsellors siso pro tested against this law because, as the put it, this makes it impossible to put sue a "bloc defence" in terrorist trials. Thus the Bonn congress once more

reverted to the issue of terrorism. Dr Schmidt-Leichner pilloried it present practice in our courts, whereby lawyer of the terrorist's own choice must be assisted by a court-appointed laws This, he stressed, can only impression that the latter is a "lawy anjoying the court's confidence."

It goes without saying that Schmidt-Lelchner is not uneware of the dilemma confronting our courts whe the accused terrorists' own lawyers denly and demonstratively take off the robes in court. Says he: "The problet could, however, be solved by introducted a substitute attorney who does not inter fare in the course of the trial as lots. the lawyer-of-choice exercises his Horst Zimmerman tion "

30 October 1977 - No. 811

No. 811 - 30 October 1977

The decision to coerce the German government to release the Baader/-Meinhof prisonera by hijscking tha Luf-thanse aeroplana was probably taken in France. The German Verfassungsschutz (Office for the Protection of the Constitution) believes thet a group of Baader/Meinhof gang members and thatterrorist lesder Illich Ramirez Sanchez, better known as "Carlos", mat soma weeks ago to prapare the hijacking. The co-ordination of this operation with the kidnapping of Hanns Martin Schleyer confirms fesra that both crimes were planned and carried out by the terrorist "internetional".

The international natura of terrorism hes been causing the Verfassungsschutz nightmares for some time. The game of hide and seek which Baader/Meinhof lewyer Klaus Croissant played with tha French police and the arrest of Red Army Faction (RAF) member Knut Foikerts in Holland recently hava underlined the fact that Garman tarrorists can count on active support from certain circles in these countries, in which they can operate and prepera further action.

The German terrorists' close contsct with the Arab terror scene first came to light at the beginning of tha seventies, when Ulrika Meinhof and Horst Mahler wers trained in Palestinian freedom fighters' training camps.

The officers responsible for their training did not rate them particularly highly, but it is avident that they had learnt a number of tarrorist skills and tactics by the time they raturmed.

Since the attack on tha Vienna OPEC conference in December 1975 and the Entebbe hijack drama of July 1976, it has been clear for all to see that German and Arab terrorists are carrying out joint operations.

These joint operations had up to now always been for Palestintan objectives. The hijacking of the Lufthansa jet "Landshut" was the first operation in this un holy alliance to halp the German guerillas - its twofold purpose was to "flank" the Schleyer kidnapping and to force tha German government to release the Baader/Meinhof prisoners.

The co-ordination of the Schleyer kidnapping and the hijecking of the Lufthansa jet renewed nightmares which bad been plaguing Western security experts for a considerable period of time: the fesr of a world cartel of international terrorist gangs which could destroy the present world order.

The freeing of the hostages in Mogadishu has removed soma of these fears. But the question remains: is there still a danger of world-wida terrorism operating under central command? The director of the Hamburg Office for the Protection of State Security, Hans Josaf Horchem, has attempted to give an answer to this question. He has worked out a typology for terrorists, whom he divides into three categories.

Into the first category come under-ground fighters on behalf of raligious and ethnic minorities, such as tha religious fanatics in Northern Iraland, the Basque ETA and the Coraican separatists. They are fighting for freedom from toreign power, tor cu or for more representation in national or regional parliaments. There is nothing new about these movements and in msny cases they have deep historical roots in their country or region.

The second category of terrorists is not fighting for freedom from central governments or dominant influences. Its goal is revolution, the violent overthrow of the system. The first specimena of this ware the Tupamaros in Uruguay, the "Red Brigades" in Italy and the "Red Army" in Japan. The "Red Army

THE GERMAN TRIBUNE

The world-wide tentacles of terrorism

Faction" and the "Second of June Movement" in this country come into this category.

■ INTERNAL SECURITY

The Paleatinian terrorists groups are different from other terrorists in that they do not operate from within one state which they are fighting against, but move between the fronts in the Middla East and have only one common objectiva; tha annihilation of Israel, Palestinian terrorism even managed to achieve a form of diplomatic recognition. That PLO's leader Arafat spoke at the United Nations and his organisation is a factor which has to be tsken into account in efforts to achieve peace in the Middle East. Fears of an international terrorist organisation appear to be unfounded given the diversity of alms, modes of operation and organisation described above. There could, however, be mutual support among terrorists. We have seen sufficient evidence of this in the last few

Weapons for a number of different terrorist organisations came from the same source in Switzerland. German terrorists used Swiss hand grenades, explosives and guns when they attacked the German embassy in Stockholm. The same Swiss source also supplied the notorious "Carlos" with weapons, as well as the three Japanese terrorists who attacked the French embassy in the Hague. False passports from the same source were found on German terrorists. on the Entebbe hijackers and in Carlos' hideout.

Because of the poor level of intemational cooperation in the fight against terrorism, It is very likely that a number international connections between terrorists still have not been discovered. The Lufthansa hljacking is clear proof of this hypothesis.

The successful storming of the hijecked Lufthensa aircraft in Mogadishn by the GS99 special unit of the Bundesgrenzschutz Federal Border Police) came five years after the bloody outrage at Füratenfeldbruck nesr Munich - the Waterloo of the German anti-terrorist forces.

In these five years, the Federal Republic of Germany has been put to many severe tests and on several occasions unlergone the humiliating experience of having to give in to terrorism. The GSG9 men have changed this, have shown that this country has learnt tha lessons of terrorism and will be able to anawer any such attacks in future effec-

After the Fürstenfeldbruck incident, Herr Genscher, who was then minister of the Interior, realised that a specialist anti-terrorist team would have to be set up to combat violence and hijackings. stenfeidbruck attack had cost too many lives. And so this ellte federal unit was set up, despite premature criticism from some quarters' and petty jealousies between the states.

But even before this unit was given the chance to show what it could do, there were meny sceptics who never tired of questioning the point and the capabilities of the unit. Others wondered wby this unit hed not been used more often in the fight egainst terrorism. The skyjacking of the Lufthansa jet

was a perfect case for the GSG 9. They

The Palestinian Wadi Hadad is considered the mastermind behind this operation. He is the leader of a group, which has broken away from Georges Habasch's People's Front for the Liberation of Palestine. This organisation specialises in skyjackings, and the Venezualan Carios Is one of its most prominent membera. The support Hadad gave the German terrorists was not out of terrorist comradeship or ideological sympathy. He was thinking of hard cash when he put his people on to the German jet.

If the Baader/Meinhof prisoners had been released the world each have been 100.000 deutschmarks; Hadad given stood to make an even bigger killing out of the operation: the 15 million dollara that were to be handed over with the two Palestinian prisoners to ba released from Turkish jalis.

This money-mindedness of Hadad and other Paleatinians has been the despair of German terrorists intha past. They hed great hopes when they first joined the Arab units In South Yemen and Lebanon. With Ulrike Meinhof's and Horst Mahler's pamphlets in their bags still providing the ideological motivation for their acts, they thought they would find allies in the Palestinlans.

But they were soon disillusioned. A few months ago, the terrorist Hans-Joachim Klein, in a letter to the news magazine Spiegel, complained bitterly about the "cynicism and lack of humanity" with which his Arab comrades in arms reacted to the deaths at the Vienma Onec conference.

Rolf Pohle, too, who was relessed in exchange for Berlin CDU leader Peter Loranz, complained about the Palestinians' "complete lack of ideology." At his extradition trial in Athens, Pohi made a number of big speeches, yet his diaries

reveal him to be a man who suffered not only because of his homosexual inclinations but also because of his lack of political friends.

The Arab and German terrorist organisations have never had anything in common from a programmatic point of view. On tha contrary, there was a considerable amount of mutual contempt.

The RAF has only recently gained the Palestinians' respect, with the series of murders which began with the killing of Chief Federal Prosector Siegfried Bu-

Hadad'a agreement to stage tha Lufthansa oparation was taken as a sign of a change of heart on his part. Now that has failed, tha German authorities reckon that cooperstion will also cease. especially as Hadad's organisation is now in a crisis as a result of the Mogadishu failura.

Opinions differ as to the future of the RAF now that its leaders have committcd suicide. This oldest German guerilla organisation had had a new lease of life over the past few months. The murder of Herr Buback and the kidnapping of Hans Martin Schleyer brought them sympathy, from the so catted "K" groups for example. The Verfassungsschutz believes that if the attempts to have the RAF prisoners released had been successful, many young people would have crossed the threshold from nolitical extremism to the terrorist underground.

After the suicides in Stammheim. there were a large number of talephone cails among members of the underground. The claim that "the comrades had "been executed" started making the rounds. The Verfassungsschutz believes that this legend is more likely to be used by the now lesderless RAF thanby the "revolutionary cells." This cadre of spare time terrorists are beheved to have been recruiting in alarming numbers recently. The revolutionary cells should have little difficulty in establishing contacts with the Palestinians. They, too, are swom enemles of "Zionist imperialism." Dieter Bull

(Oie Zeit, 21 October 1977)

keeping passengers hostage, the GSG 9 action in Mogadishu was highly effective. Not a single hostage was killed, the bullets only hit the terronists.

On 8 May 1972, twelve Isracli elite soldiers disguised as mechanics stormed an aeropiane at Lod airport with equai precision, resculng 91 Belgian passengers and killing two tarronsts. Then followed the terrible Olympic massacre in Fürstenfeldbruck. The Germans, who ot that time had no special units for this kind of criminal situation, failed completaly. Thay had previously rejected Defenca Minister Dayan's offer to send Israeli troops to Munich to rescua the Olympic team.

The Mogadishu action by the Bonn GSG 9 can be compared with the Israeii rald in Entebbe on 4. July 1976. The main difference is that the German unit had the full consent of the Somalian government to carry out their attack whereas the Israeli's had to infringe on n territorial sovereignty and act against the will of tyrant Idi Amin.

In August 1975, the Egyptians, using tricka they bad learnt from the Israelis, stonned e passenger plana in Luxor and shot a hijacker who was allegedly in the. pay of the Libyan head of state Gadd-hefl. In the Dutch attack on the train held by Moluccans, two hostages were also killed. This is a risk which simply cannot be ruled out In such ottacks. Hans Wüllenweber

(Der Tagesspiegel, 19 October 1977)

DEVELOPMENT AID Marie Schlei on Bonn's assistance to southern Africa

Bonn's ; aid for the front states in southarn Africa - among them Mocambique, Zambia, Botswana, Tanzania, Angola - has given rise to haated disputes. A Sonntagsbiett editorial team inter-viewed Mrs Schlai, minister for economic cooparation and dayalogmant.

Q: Mrs Schlei how do you justify your ald to the so called front states in southern Africa - an ald which is largely ald for refugees?

A: Our development policy is aid for the region and aid for the refugees. It operates independent of religious, Weltanschauung or political affiliations, and It is an attempt to reach people in need. It operates whenever a contribution towards satisfying basic needs can be made. In cases where the state is unable to do so by its own resources alone including state aubsidies - foundations, churches and other organisations participate. This fundamental question of our development policy has been decided upon. Compared with this, all other questions are of secondary importance.

Q: Does this principle of satisfying basic needs also apply without restric-tion to countries which harbour refugees and perhaps sympathisers of liberation movements?

A: Cooperation with such countries, as with communist-governed countries, is only a problem of our domestic politics. From the viewpoint of those concerned It is no prohlem. We are wanted as partners and other nations increasingly seek-cooperation with German business. We wouldn't dream, therefore, uf subjecting ourselves to embarassing situations In terms of foreign policy for reasona of domestic politics.

Developing nations cannot be categorised according to our yardsticks as socialist, communist or capitalist. Moreover, it is frequently overlooked in discussions that Gennan business Itself attaches a great deal of importance to cooperation with such countries. That moment tha state operates in those countries and concludes treaties, investment safety for private husiness also increases! So much for principles. Granted, the refugee situation in southern Africa is very much in the limelight at present, but we provide bumanitarian aid for other parts of the world as well. The refugees in southern Africa are by no means people who are wandering around for the sake of adventure. Those who hava to flee lesve their families, their bome countries and their livelihood behind. Admittedly, they go to a country which is also populated by black people, but for these people the other black African country is as little their homeland as would France or Rumania ba for us.

Q: Why can the front states thenscives not manage to look after tha refugees?

A: The states on the periphery of the conflict which call themselves front states have to cope with a difficult de-velopment of their own. Embargos and war-like conditions add to the burden. And now the refugea problem adds to it still further. In this situation they depend on outside help.

Q: African government representatives - and not only from Botswana - were outraged at the report of the Opposition's spokesman on development aid. According to Herr Todenhöfer, the refugee camp Selebi Pikwe in Botswana is supposed to be a training camp for guer-

rileros. in his latest question addressed to the Government, Herr Todenhöfer stated that this camp has oow already been conceived as a future prison. According to him both of these facts were known to the Federal Government. How do you view the situation?

A: Democratic Botswana is the poorest country in southern Africa. This country demonstrates how Black and White can live and work with each other and bow, within the government and indeed the cabinet, Whites hold executive positions and exert their influence and their power. And now it is Botswana of all countries which is exposed to this defamation process which has its roots in domestic politics. Moreover, it seems as if the illegal Rhodesian government is making usa of such statements in order to prepare for an attack on a Botswana which cannot defend itself, has open borders and no armed forces. Here a sagaciously conceived foreign policy is destroyed by defamation of a democratic.stata and by maintaining that it makes use of the funds set aside for development aid in the Federal Republic of Germany in order to erect training camps for freedom fighters

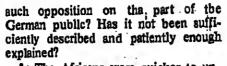

Q: And for prisons, as Herr Todenhö fer maintains.

A: 1 am not at all surprised that the development sid spokesman (of the Opposition ed.) is so quick to change the reasons given for his attacks. Sometimes the camp is a transit camp, sometimes a transit and recruiting camp, sometimes a transit receiving and recruiting camp. And now it is supposed - at soma future data - to become a prison. There was never any talk of such plans between the governments concerned.

Q: The Federal Republic of Germany bears particular responsibility in the case of Namibia, and this includes the Germans there. How can we do justice to this responsibility?

A: There, tha Protestant Cburch bas pursued an exemplary policy of conciliation by making tha Swapo leader Tjongarero the director of an institute. This a wise policy, since only in a dialogue can we come closer to the liberation movements and act on behalf of tha Whites for whom we feel responsible. This policy is wrecked by the senseless rightist iews of the Opposition.

Q; Why has your policy met with

A: The Africans wars quicker to understand that the Federal Rapublic of Germany's government is prepared to engage in a concrete Africa policy rather than just pay llp service. During my Africa tour, the states which I visited demonstrated: We want to remain nonaligned, we want to remain free of power influences of an imperialist character. This was also a signal to Podgomy and Castro who were touring Africa at the same time. The Americans have understood this. But this has not been conveyed to the Federal Republic of Germany's public. Instead, we experienced a defamation .. campaign against me. Our successful dialogua with Africa has therefore not reached the public.

Q: What is your attitude towards the reprosch that you support primarily militant liberation movements?

A: Our support cannot be restricted to one group. Freedom movements must ba supported where people in need of help, above all refugees, are involved. No freedom movement is excluded if it can ba reached. Incidentally, what do you mean by militant? All these freedom movements are militant in a way. The people of Zimbabwe, the people of Namibia - they no longer want to hear stalling peace slogans. Tha people there have been waiting patiently for decades. While other black African peoples were able to begin their Independant developmant ten, twenty or mora years ago, the people in Namibia, Zimbabwe and in the Republic of South Africa - as opposed to their black African neighbouring countries - still live under conditions which deny them the possibility of an independent planning of their way of life under their own responsibility. The people of Zimbabwe see that Smith again held elections along tha lines of the old discriminating formula and that be thus continues to govern. Thus the peopla can no longer beliave in the propagated peaceful change. And we at our desks Ignore this tragedy.

Q: Todenböfer speaks of irrefutable evidence which he has brough with him from his trip. Has he presented this evidence to you? At That is exactly what be hasn't

the second of both to the

Minister for Economic Cooperation and Development Maria Schlei (Photo: Sven Stellon)

done. Only newspaper reports Wetter THE COMMUNITY lisbad, and who can say with cent who killed the people shown in a photographs? Incidentally, soms the bear the stamp of the Information is istry In Salisbury, Moreover, it was nonsensical to link refugees in Botton with the bodies of people 1,000 in metres away.

Q: So you stick to your policy ha will be no review of the sld for Sta Pikwe? The reproach that you suge terrorists is unacceptable for your

A: It cannot be excluded that is are sympathisers of the fight for h dom and the various liberation anis tions in refugee camps in southern 15 ca: But I cannot agree that in soon Africa this is assessed differently the would be if it took place in the m world: A person who flees and mi against a repressive regime would a sumably ba termed a freedom liet here in Europe. The language is as pression of awareness. I cannot van black freedom fighters to be vilified terming tham terrorists, as objust theoretioiana here interpret this. I German is supposed to say: All, im ism here, tertorism there - the So Damocrats are always there. Why is tha write-skinned person a freedom li ter and why not a black-skinned so He has endured repression much les has been humiliated longer and i much longer exposed to absolute 10 ty. We Germans have always acity all aid offered to us, the Marshall P2 Unicef aid and the Quaker aid. No that we have a chance to help other

SONNTAGS BLATT

the rightist reaction stands between of objectives and the Garmans' willinger to help.

Q: Why have you not stood up me determinedly and earlier for your \$ port for refugees, in other word potential freadom fighters as well?

A: My statemants bave remained the same. I have been expressing me clearly and unmistakably on this in for months. If the public has not isorbed these statements or if it is brushed them aside as unimported his is only aoother Indication of how piece ties are assigned in the opinions po lished here.

No. 811 - 30 Octoher 1977

The search for a better **Europe continues**

SuddeutscheZeitung

The European Community can be likaned to a Cburch which has lost its faith.

The grand time whan the six original member states - still under tha impact of World War II - agreed to cooclude the Treaty of Rome is long gone.

What remains is the spirit of de Gauile who always gave priority to national interests and who tried to prevant every step towards supra-nationalism. But there also remain a few guardians of the Holy Grall who are trying to revive the spirit of European unification.

De Gaulle's heits are now to be found in all governments of the member nalions; and only few European politicians have the moral right to condemn Britain's Prime Minister Callaghan who gleefully sees a further weakening of the Community in its inexorable enlargement hy Greece, Spain and Portugal.

The few guardians of tha Holy Grail, entrenched in the Palais Berlaymont in Brussels, are still hopeful, however, that this is an opportunity that could reawaken the awareness of a true Europe.

These hesieged guardians have levelled the accusation that many of the national politicians, in their shortsightedness and thoughtlessness, are in no position to realise the effects of an enlargement just as they were unable to do so when Britain, Ireland and Denmark joined the Community.

The hope that Britain's membership, above all, would contribute towards the Community's damocratisation proved il-

What is at stake this time is the preservation of democracy in the threa Mediterranean countries. All are agreed with regard to the major objective of politically securing the Community's southern flank in this manner. But there is little zip behind such lip sercice.

Europe's industrialised natioos are already concerned about democracy at homa and are therefore guided by petty national interests and worries.

The Fedaral Republic of Germany spprehensive of a South-North migration as a result of extending freedom of movement to the new members (Greece already enjoys this freedom as a result of the Association Treaty). But Bonn is equally concerned about naw demands for money for the Common Agricultural, Regional and Structural Funds which, it is estimated, will amount to DM5.000 million.

France and Italy fear the chespen competition on the agricultural market - especially with regard to fruit and veeetables, citrus and wine, And vu all anticipate threats to their textila industries, which are in jeopardy anyway.

These concerns have supplanted the long-term advantages of an enlargemant. Apart, from securing the southern flank, these advantages would mean a greater weight of the community of twelve outwardly - above all by means of the Ibarian bridge to Latin America. Another advantaga would be the impulse to continue the integration of Europe. But this very possibility is not considered a blessing by the three great mem-

bers. Britain has already advocated that tha EEC ba danatured into a free trade zone. The French are concerned about their influence, and even Bonn feels that stepped up integration would invest the unloved Brussels bureaucrats with too much power - bureaucrats who, in Chancellor Schmidt's view, are not even capable of managing a street-car com-

Tha great members thus favour a step-by-step policy. With regard to Greece, where negotiations are already in progress, an agreament will have to be concluded - but in due course. Concerning Spain and Portugal, the Nine will take their time - and plenty of it.

The consequences would be at odds, with the great objective. Due to the fact that negotiations with the Community are dragging on, Greece's Prime Minister has decided to hold parliamentary elections a year ahead of sohedula. And it is extremely uncertain whether in ten years' time Spain and Portugal will still be democracies worth preserving.

For the Federal Republic of Germany such a policy entails dangers. Bonn is interested in preserving and enlarging its markets. But a policy which aims no higher than at creating an exception here and an exception there and of patching up what already exists can hardly serve such an objective.

Where the textile industry is concerned, protectionism has already gained entrance to the EEC by the back door. For the weak branches of industry among the new members it will also be necessary to agree on certain protectiva measures, which only means that the disease of protectionism will spread. In other words, if the ideas of the founding fathers are watered down the Community will not even become a free trade zone worthy of the name.

As a result, the Brussels guardians of the Grail view the present course of the enlargement policy with the greatest of concern.

EEC President Roy Jenkins as well ss the German: Commission members Brunner and Haferkamp favour a big lesp forward. Brunner is in the vanguard of this move. He would like to revive the dormant Monnet Committee and to persuade such unwavering Europeans as Edward Heath. Walter Scheel and Leo Tindemans to preach the old creed with naw zeal.

He would also like to summon a conference of the Nine and the three applicants in order to discuss the shape aod objectives. of an enlarged Community

. ..

now? South Africa for the Africans, but with German assistance? .

A: Who can tell how a country will develop politically? Egypt is now a pillar in the Middle East. Somalia seeks cooperation with the West. Other states move in different directions. We want - and this is being believed more and more no zones of influence on the African continent. It is to be an African way which the peoples of Africa are to go.

Some leaders of liberation movements have accepted our ald because we gave them assurances that, the moment their countries - Namibla and Zimbabwe, are free, wa shall offer them development aid, particularly in the form of technical aid. It is due to this statement that wa are interested in their future that they are willing to extend friendship, I don't want to attribute this to my-self, but it was high time that this came

about.

(Deutsches Altgemetnes Snunlegablatt, 16 October 1977)

G H14 (Carloon: Horst Halizinger/Nordwest Zuitung)

and to develop the Treaty of Rome Into a sort of European Constitution.

But this, too, would take time, and the interint period could be used to help the applicants prepare themselves for membership.

Equally bold is Roy Jenkins' Idca of a monetary union and the introduction of a common currency.

The accepted view hitherto, namely that the inhabitants of Hamburg and those of Palermo must enjoy tha same standard of living before a European currency can he introduced, has failed to convince Jonkins.

He points to the United States as an example where, notwithstanding a common currency, there are still considerable differences in income levels. In his view only bold ideas can be of any help. But all such ideas amount to a North-South equilibrium in Europe and would cost money - above all Bonn's money.

Finance Minister Apel has therefore already dismissed such ideas with the terse comment: "Rubbish."

But, given careful consideration, the cost can be justified. It can be justified economically because this would create a larger free market; it can be justified poitically because it would do away with the danger of isolation into which the Federal Republic of Germany has been driven by the attitudes of Schmidt and Apel, who maintain that a healthy body s surrounded by nothing but the ailing.

The damage which the "model Germany" has meanwhile sustained has already given rise to plenty of ndicule.

It must, however, be granted that the difficulties are evident and cannot be overlooked. Apart from the danger of a new inflation, there is the threat of a farmers' uprising.

The EEC cannot afford a tomato mountain on top of a butter mountain. To start with, the privileges of North European farmers must be curtailed and the money thus saved used for structural improvements in the South.

All this can probably, not be done without a wider scope of authority for the Commission although avon tha most bold of pisnners dare not tlunk of rigor-

ous constitutional changes. This means that the last word rests with the heads of government. Evon before presenting his ideas to Chancellor Schmidt, France's Prima Minister Barre and the Council of Europe In Docomber, Jenkins has already modified tham to soma extent, namely: proceed with sinaller steps towards a monetary union, at about the pace as proposed by his French deputy Ortoli, who suggested a five-year plan for starters.

Dieter Schröder (Suddentsche Zeltung, 18 October 1977)

JET centre to be sited in Britain

The agreement reached between the EEC Foreign Ministers (still to be finalised by the Community's Research Ministers) concerning the site for the joint European nuclear fusion research centre (dubbed let) has settled a long and unpleasant dispute.

There were times when it seemed as if the choosing between Culham in Britain and Garching in Bavaria would senously impede Bonn-London relations.

This danger is now over. No new arguments had been put forward in the Jet Issue for a long time. Essentially, the whole thing amounted to: Culharn or nothing.

One of the British arguments, namely that Great Britain is still without a single major EEC project on its territory. now seems to have convinced the other members of the Community.

The fact that the talks between Chancellor Schmidt and Prime Minister Callaghan took place in the relaxed atmosphete following the happy end to the hlacking of a Lufthansa jet might have mada it easier for Schmidt to agree to Callaghan's proposed site.

But it is also pretty certain that that eeded this success In vits European policy at this very moment - namely 'immediately after the Labour Party Conference in Bright-

But this is by no means certain; since the view that London's Europa policy could be the least blf swayed to embark on a more pro-European course by a European gesture has proved unrealistic on several occasions in the part.

MOTORING

The most realistic test crashes not realistic enough

Rölner Stade Binscher

Libet no-one has survived this!" Such apontaneoue remarks are frequently heard at the aite of a aevere road accident. They are prompted by the badly damaged vehicles which aeem to indicate that the very worst has happened.

Accident research throughout Europa, carried out by the automobile industry and its research teams as well as by apeclai research institutes which have been opcrating for the past twenty years in the EEC nations, has come up with some aatonishing findings. Research results show that even crash

Research results show that even crash tests carried out with the most sophisticated of instruments and with dummles of human beings provide no results that can be absolutely equated to reality.

This is perticularly ao in view of the fect that the simulated crashes of cars with dummics as passengers mostly take place at an angle of 90° against a rigid obstacle.

The conclusions arrived at from auch crash tesia led to the development of "eafety vehicles" the paseive resistance of which — es has now been established — does not always provide ebsolute safety for the occupants.

Subsequent improvements of crash tests in frequently very coslly experiments — as carried out by Europe's automobile industry — have also simulated oblique collisions and accidenta in which the vehicle turna over, but their results with regard to injuries austained by passengars and arrived at by means of dummics are out of keeping with reality — though of course not wortbiess.

The decisive impulae for these tests emanated from the United States in the sixties. And these experiments we most useful indeed ot a time when no-one realiy knew what actually happene to the passengers of a car hitting s rigid obstacle at a 90° angle and at a speed of 80 kpb.

The American then tackled the accident problem with very conalderabla financial means, and this led to a set pattern for the passive safety of automobile occupants based on acientific methods that could be applied in a constructive manner.

At virtually the same time Europe developed a different Idea, the line of thought being more or less as follows: "We shall pay less attention to the vehicle as auch and concern ourselves primarily with the reaction of passengers in severe eccidents. This includes e comprehensive examination of the injuries sustained in crashes."

The Renault company in France, with the help of the police, therefore started by atudying several thousand actual road eccidents. Similar tests were carried out in the Federal Republic of Germany in 1972/73 where the causes and the conacquences of road accidents were recorded in etatistical form. These statistics will now be reprinted and mada publio again.

10204

All studies showed that bead-on collieiona — in reletion to the usual speed at which we drive today — led to much more severe consequences in tests than sons for switching to motorcycles.

in real life, where occupants have been found to aurvive.

In many instances the appearance of a vehicle used in crash tests could give rise to optimism concerning the fate of the passengers, while in sctual accidents they were killed. This is particularly so when the passengers wore no safety belts and were thus exposed to retardation forces acting with split-second speed.

in the course of continued cooperativa. European accident rescarch it turned out. that head-on collisions account for a high percentage of road accidents, but that collisions at an oblique angle occur much more often than assumed.

Only in 17 per cent of the eccidenta under review did an automobile hit a fixed and rigid obstacle head-on. In 68 per cent of the cases the collision occurred with another moving automobila (this includes oblique angles) or with lorries, which also account for 17 per cent.

Such collision eccidents between two moving eutomobiles (including thosa at an oblique angle), in other words the obovementioned 68 per cent of the cases, led to a fatality ratio of 29 per cent.

Roughly 70 per cent of all accidents, the study shows, occurred at an oblique angle involving another moving vehicle. The forces exerted in these real accidents have an entirely different effect from those established in experimenta.

What matters is which of the two vehlcles involved is the lighter and which the heavier one. it turned out that a small degree of distortion of the vehicle can lead to great changes in speed (retardation forces) within the automobile. In other words, heavy distortion fre-

Group photograph of Volkswagen's crash test dummies

The results of these tests were supering inasmuch as they largely coinsis with the causes of desth in real tak accidents.

Throughout Europe, the safety k proved to be the best preventive me ure for all types of motor accidents. It also turned out that the head-lo?

collision of two vehicles accounted b only one per cent of fatalities in reaccidents and is thus atatistically unimportant.

The much-vaunted "whiplash effect (which is supposed to be prevented b) headrests is also rather rare. It is there fore open to discussion whether the benefits of hesdrests are not outweight by the fact that they obstruct the rez view.

Five per cent of the fatalities ocarb vehicles that have turned over as a null of a crash, compared with 40 per to that are attributable to doors which not lock properly and permit the per senger to be hurled out of the car.

A ccording to the Cologne peychologists Rolf Dellen and Gerd Bljersbach of the Delberg Institute for Psychological Research and Counselling, It is primarily the thrills and kicks that are the main reasons for the continued motorhike boom of the past faw years.

Many owners of motorbikes are motivated by the "joy of danger and of coping with this danger."

Following a great many interviewa and the assessment of international and their own research results, the two peychologists, speaking at a congress of the Work and Research Group for Traffio Safety of Cologne University, pointed to "flight from civilisation" and boredom with the comfortable limousines of our affluent society as one of the main reasons for switching to motorcycles. For many of our contemporaries, it would seem, a ride on a souped up motorbike ia tantamount to overcoming feelings of inadequacy and weakness which they might have experienced in automobiles.

Thus, for instance, the owner of e DM9,000 motorbike of 750cc asid that he had formerly, while driving a VW, only been pushed around. "Now," he said, "i am at last at the head and not at the tail."

Some of the two-wheel hot rodders edmitted that they wanted to show off. Psychologists in the United States dis-

covered a apecial psychological syndrome among motorbike owners which they aptly called the motorcyle syndrome.

Those afflicted devote an excessive amount of time to their vehicles, they are frightened of hurting themselves and usually have a disturbed relationship to their (mostly) successful father. They are usually pasaive in professional and sporting competition, auffer from insomnia

and consider themselves weak and imnine.

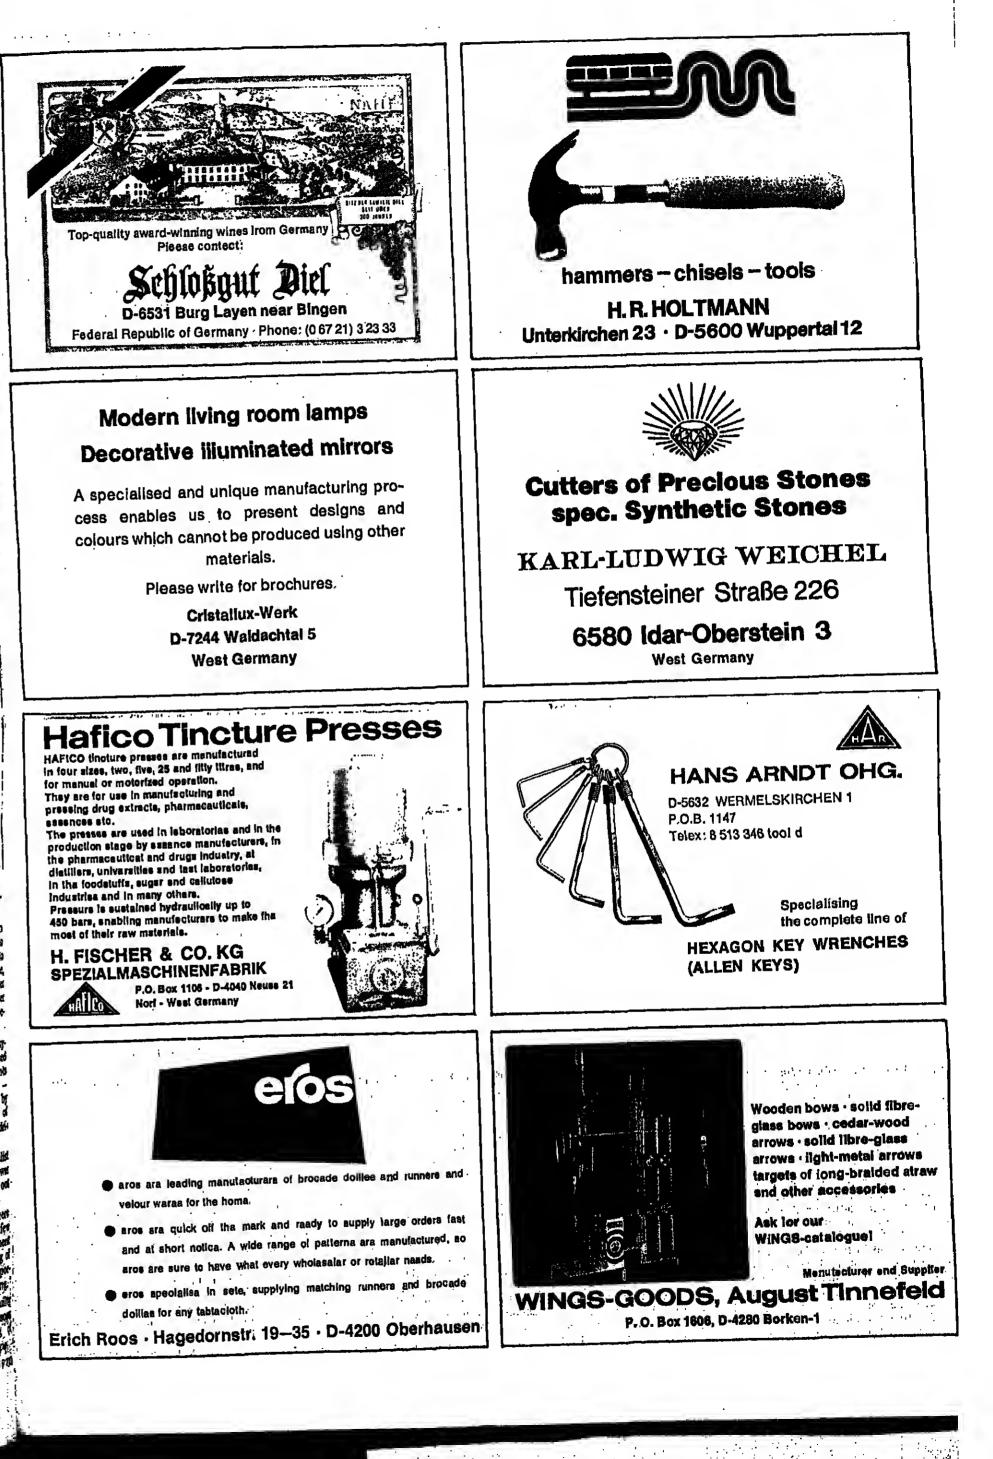

These people need their hot blks b order to land purpose and direction is their aimlessness and in order b strengthen their fragile aelf-assurand, thus giving the impression of power which they do not possess. In other words, for them the motorbike has by come a drug.

In view of all this, the Cologne par chologists themselves were suprise when — in essessing severe accidents involving motorbikes and automobile they found that motorcyclists were by no means more frequently the cause of the eccident than were automobile drivers.

In those cases where the motoroycle actually did cause an accident, this we mostly due to tha kicks they were of for.

A study of police files on all evet motorbike accidents in the past fr years showed that the most freques causes of collisions were the ignoring a the rule to drive on the right, disproper tionate apeed and dangerous overtaking

Among the automobile drivers suit of causing an accident, the main reast were wrong turning and enterns, atreets. Ruth Lindenbers of Ole Welt, 13 October 1970

THE GERMAN TRIBUNE

Money and business reign supreme at Frankfurt Book Fair

10

BOOKS

he six day Frankfurt Book Fair is . over. Evaluations of its success are, as one would expect, mixed. The overall attitude among the 4,500 exhibitors was positive, ranging from "pleased" to "very pleased." There were few negative judgements to ha heard.

Tha Frankfurt Book Fair is tha oldest and largest event of its kind in the world. It is not, however, a fair in which the exhibitors compete for orders - this year even less ao than in previous years. The ista dato of the fair underlined this. The publishers' salesmen took in their orders long ago, and the bookshop stores are aiready full in readiness for Christmaa. The trade was very cautious about putting in late orders.

When ona asks how much husiness dona at the fair contributes to annual turnover, most publishers' representa-tives shake their heads — in most cases the amount is so small that they are reluctant even to name a figure. In aoma cases even one to two par cent is too high an estimate.

The Seewaid Verlag is ona of the few publishing firms in which business from the fair accounts for a aizeable part of turnover; they estimate it at about three per cent. The Seewald Verlag was also one of the publishers which was "extremely pleased" with its results at the

: One of the main ressons for Seewald'a rigid as one might imagine, although the auccess was its books on economics. various publishing houses seem to have

The Pollsh philosopher Leszek Kola-kowski was awarded tha DM 10,000 Peace Prize of the German Book Trade in Frankfurt last Sunday, Herr Kolakowaki, who lives in exile in Great Britain, was presented with the prize by Rolf Kciler, chairman of the Borsenvere in (the German Book Trade Association) in the historic setting of St. Paul's Church in Frankfurt.

in the presentation document, Herr Kolakowski is described as a man who has always atressed the importance of openess and unswerving commitment to the truth as preconditions for all worthwhile thinking, Political scientist Gesina Schwan described Kolakowski in her eulogy as an outstanding representa-tive of Poliah intellectual life. He was expelled from the Poliah Workers' party in 1966 for "revisionist writings". He was also stripped of his professorship. For the last ten years he has been teaching at the universities of Berkeley, Mon-Yale and Oxfor

Å

Herr Kolakowski's acceptance speech was on the subject of hatred hetween nations and people. He spoke of the present "terrifying phase in the fight for justice against torture and extortion." We spoka of peace because it did not exist and of hatred because there was too much of it in the world. Ha went on to say that we will perhaps have to live with terrorism for some time to coma -

but "we will have to live all the same." Education for democracy, he stressed, is education for dignity. This meant "a

moirs of businessman Paul Kleinewefer. The latter was one of Seewald's best sellars and was backed by a powerful publicity campaign. The publishers' sales strategisls believe that they have found just the right trend with their books on economics: producing popular but not over-simple works which are of interest to the layman.

The Econ Verlag is on the crest of e aimilar wave. its "Weltwirtschaft" (World Economy) hy Wilhelm Hankel, Besser Verkaufen - Mehr Verdienen (Sell better - Eam More), "Der Deutsche Markt um 1990" (The Garman Market in 1990) are three major successes. Tha publishers themselves describe this economica series as "Applied Economics.*

Economic textbooks and books suggesting possible solutions to current economic problems were also much in daniand at the Fair. Two books which come ioto this category are "Strategies against Unemployment" published by the Europäischa Verlagsanstalt (EVA and "Riding a Tiger" - a book desling with the pros and cons of atomic energy, also published by the EVA.

Commentaries on new laws which could have far reaching economic conacquances for those concerned were also in demand, such as works on the "New Divorce Laws" and "Regulations Governing Business Transactions."

The demarcation batween popular and scientific economic textbooks is not as

with titles auch as "How Affluence was" vastly different concepts in this respect. Destroyed" and "Bom: 1905" tha me- However, looking at the sales of these books over the year, ona notices a striking difference. The popular hooks were on the market well before the fair and were already selling well. There was conaiderable interest in them at the fair.

The aituation in the case of scientific textbooks is quite different. Sales. here are not at all dependent on tha fair. They are apread over the whole year, with a certain increase in demand at the heginning of university terma. The hookshops have already got their stocks in for November. What the students need for their courses has to ha in the hookshops well to advance.

What then are huga events such as the Frankfurt Book Fair all about? On tha one hand, making and maintaining contacts with the hook trada and with authors (one publisher estimated ha had had at least 70 talks with authors in Frankfurt). Then there are discussions with foreign publishers about the sale and purchase of translating rights and then, last of ail, we regret to say with tha consumer, the reader himself.

Discussions with foreign publishers ahout royalties and translation rights played a bigger part this year than at previous fairs. It was not always a question of signing contracts. Often it was just a matter of discussing what was on the market, what prices were, etc. This is what one publisher was referring to when he said: "In Frankfurt It's not about mind '- it's about money."

A bonanza of THE ARTS records in Frankfurt

KielerNachrichien

Tew records are set every year and Frankfurt Book Fair - almet a matter of course,

This year, as fair director Peter Wa haas pointed out at the press conferen there has been a more speciary upward movement than for many in despite world hook fairs in Lein Brussels, Nice and San Francisco fa year - and a new fair in Moscow min faw weeks ago....

The number of Spanish exhibit rose hy. 70 per-cent, from Switteds the figure was 50 per cent, from Free 30 par cent and even for Great Bin and the USA over 10 per cent.

An American journalist had the lowing explanation for the fact the Frankfurt continues to attract so my publishers and hook trade people; "h ple icoma to Frankfurt because \$ coma to Frankfurt."

The number of publishers exhibit rose from 4139 in 1976 to 4537. Ma than 2900 of these have separate study the rest were on national stands. The were 279,000 hook titles, 89,000 d which were new publications. There i no overall hesding for this year's in Next yesr however there will be one "The Child and the Book."

There were some regroupings of polishers this year in anticipation of the plan to have German speaking ad its aign languaga publishers in differ parts of the Fair comple from neat

The reason for this move is H German publishers ara mainly intensis in gaining the attention of the mean and the public, whereas foreign public hers are mainly interested in discussion with authors and translating contract.

The opening speeches were orested dowed by the recent events in the country. Reinhold Neven Dumon, of behalf of ten German publishers, or demned the attempts to label this Garman authors "aynipathisers will it rorists" and he declared the publishe solidarity with thair authors

Tha first speaker at the opening remony was Bundesrst Preisdent Bernhard Vogel, Referring to the subject of terrorism and its causes, ha defended the democratic character of this county adopting a line of argument similar that used hy Presidant Waltar Scheel a recent speech: "A country is only free as the discussions that take place it and the books that are written iblished in it can he." Dr. Vogel ab spoke of the necessity to be more actin in its cultural interchange, with foreig countries.

Belin is well on its way to recapturing old glory as cultural centre

he Berlin festival, with its exhibitions, readings, concerts, cabarets and performances under the general heading "Trends of the Twenties" is coming to an end. It was an encounter with the city's own past, an attempt to reconstruct or relive what life must hava been like in those days when the city was undivided and in the mainstream of revolutionary artistic movemants. From 1920 to 1930 Berlin was a centre of European culture.

A certain amount of nostalgia was herefore inevitable. But this festival was by no means just e hankering back to the good old days. The city still has some of the vitality, energy and passionate Interest in new idess and movements which characterised it in the twenties. The Meta-Music festival which had its effect as far away as South East Asia and Japan, is one proof of this. The festival is another. It aroused more national and international interest than any of its predecessors and proves that Berlin is still very fruitful ground for the arts.

This is a good moment to reflect on the question of how Berlin can maintain this influence and effect. Tha role of Berlin In divided Germany has been described in many ways: it has been called a front-line town, an Island in a red sea, the showpiece of the West, and each one of these phrases refers to and describes a phase of post war Berlin history. None, however, is an adequate decription_of_the city's present situation.

Will the next epoch perhaps be: Berlin, city of the arts? The festival, unique in Europe, was not the only event to reach new heights this year. The Film Festival in Berlin Is as important as the Cannes Festival, and the town's theatre gathering is unrivalled.

The reasons for this high standard can be stated. The Film Festival has increased its programme in tha categories of film history, relevance and quality -in contrast to the commercialisation of the Cannes Festival. Tha theatre gathering has benefitted from the improvement in quality in the German theatre (which experts such es Jan Kott now consider to be foremost in Europe) and this has made the theatre gathering an event unparalleled in its high standards.

The Festival has established itself by choosing naw aubjects and reorganising the programme. Programmes dealing with the city's past are sure to be a auccess - we saw this some years ago at the "Aspekte der Gründerzeit" exhibition, and it was confirmed at last year's programme, on Schönberg's works,

The success of these programmes gave rise to a plan for a Prussia Exhibition, which is now being worked on, and ia due to open, in 1982, This will mean that for the first time a Berlin exhibit tion will deal with a repressed of als torted parod of national history .-... more so than the "Questions on German History" exhibition of 1974: It is a risky enterprise, which will raise a number of problams both here and abroad (in Poland , for instance). Discussion on these problems is now going only ... in the

The Festival comes into fits own whan It not only buya specialities for the international summer festival market but also shows the connections between the srts in a given period and heips to overcome the tendency to look at aspects of

» Frauffurter Allgemeine

tha arts in isolation, thereby showing an epoch in its context. Tha visitor is presented with a period in all Its complexi-

Numerous plans have heen drawn up for Berlin. They will consolidate and complement what has already been chieved.

" An information programme and a film fair will complement the present festival. The theatre competition which is always aold out - will be complemented by naw avents. Up to now it has tended to concentrate on a few performances from a small number first class thestres. This means that up to now top-class plays have coma to Berlin but the event has, as a result, only reflacted one aspect of work in the theatre. It has not done justice to antitheatres in big towns, and "off-off"

There is talk of an alternative programme of free theatre groups or, if this not possible, exparimental performances. A festival of thia kind is being hald at the moment in Munich. Berlin will have to see how the Munich experiment goes and, if it is successful, start something along similar slines here. "The Berlin Jazz -festival, the biggest jazz forum in Europe, will be complemented by an alternativa free jazz festival and commissioned works containing elementa of jazz and lements of serious music

There will he a shildren's forum and a Berlin Conference at the festival, in which current and scientific problems will be discussed. A special programme "From the Schiffbauerdamm to Broadway" is planned for the 1979 Tele-communications Exhibition and, for the spring of 1979, a "Berlin-Parls-Moscow" roject in collaboration with the Centre ompldou in Paris.

The Berlin cultural administration is also faced with the problem of the summer gap. Summer tourists find little to inspire them in the city apart from a few exhibitions. So summer festivals are heing planned to fill this gap with theatre, dance, foik music and pop festivals.

This programme seems to have been planned more with the peopla of Berlin in mind.

The most important project is a festival of the Third World which is to taka place, altomatoty with the Meta Music festival, every two years and in which prominent and typical artists from tha Third World will be coming to Berlin. It is certainly a daring experiment and may be more successful than similar attempts in Berlin and in other cities.

These are ambitious and expensive plans. There is even a danger that the people of Berlin could be carried away in the intoxication of non-stop culture programmes. But it must be remembered that the elty's cultural programme is not Berlin alone - it has a wider integrating function for Germany and for the West.

The Chancellor, in a speech to Daimler Benz workers recently, underlined his commitment to this programme. The

prohlem of finance has already been solved in preliminary discussions in Bonn, Helmut Schmidt has stated that he does not want an elitiat festival for Berlin but a "mixture of Salzburg and Recklinghausen", with a large number of workers from weatern Germany attending. He balieves the trade unions could be persuaded to publicise the events. But who is going to make thia dream come trua. Who is going to subsidise travel costs?

Even if this goal could he achieved, Berlin would still bave a number of problems to overcome. Berlin has so far concentrated its publicity campaigns on the city itself, and thera has been little advertising in the rest of the country. This will have to change if events in Berlin are to altract more outsiders. Even this summer, all the hotela in Berlin were booked out and there aimply are not enough flights to and from the city. This will have to he changed.

Even more important, the programme will have to be arraged in such a way that the visitor who only spends three or four days in Berlin gets an impression of the whole range of cultural acli-vities in that city. The festival programme this year was a step in the right direction.

This is not the first attempt to estahlish Berlin's cultural position and stress its importance as a European centre. The efforts made up to now must be continued. One still hears the complaint that this is all artificial and imported. The question is what the city makes of its potential and the new chances. A lot will depend on whether it can persuade the somewhat reluctant theatres to take part in the programme.

The city can go on from here. The public is interested, curious, reacts quickty. All the major events seein to create the stmosphere which makes Berlin unique. The chances of winning the day over faint heartedness aod scepti-Gunther Rühle cism are good.

(Frankfurter Allgemeine Zeltun für Deutschland, 6 October 1977

The sixth documents exhibition of contemporary art in Kassel ia now over, having lasted a hundred days.

As Manfred Schneckenberger, the exhibition's art director, put it, the documenta had served its purpose. It had been well visited, and had given many visitors the opportunity to satisfy their curiosity about modern art close up, not at the respectful distance from which art normally contemplated. This all sounds most impressive.

There were about 360,000 visitors to the documenta 6, which means that anaverage of 3600 peopla a day went through the Fridericianum rooms which vere filled with photos, videos, paintings and sculpture, filed past the drawings in . the Orangerie, walkad around and over the landscape sculpture in the Aue park and visited the book exhibition in the Neue Galerle.

The art on display here was certainly consumed: the 360,000 visitors saw to n in this case, as hat - and cons at the documents 5 which was visited by 225,000, meant not only use but wearing but, abusing and evan destroying.

However, quoting figures and records - the documenta spokesman told dpa that there had been well over 500,000 visitors to the exhibition, and the news agency promptiy hroadcast this world-wide - is not enough, and is certainly no answer to the sceptical predictions made shout this exhibition. Too many important facts have simply been ignor-.

documenta 6 falls short of mark

Taka for example the reaction of some of the many thousand visitors who expressed their bewilderment and incomprehension in verbal rejection and physical aggression, (Joseph Beuys took a lot of time and trouble to talk to the visitors and explain his work, but this tells us nothing of most visitors' attitudes towards modern art).

Many artists exhibition ! organiser gallery managers and museum "peop where disappointed with this docume. ta. Then comes the fact that, all in al national and internetional criticism the exhibition was negative, in the spe cialist and in the ordinary press.

Some sections, such as the drawings sculpture and sometimes the videos. were mentioned es honourable exceptions and there may have been regret in nome guarters at the end of the exhibit tion, but this does not affect the overall negative response.

Manfred Schneckenberger, "Idokin, back over the 100 days, judged that the "quality of publicity was highter than for the d 5". The exhibition was plague by crises, threatened resignations which were never tendered and nonsensical concepts which were called off. Hert

Schneckenberger got the exhibition going despite all this and was also responsible for the sculptures which were among the most interesting and successful sections of the exhibition and so his insistence on its success is understandable. But comparisons with the d 5 do not flatter this documenta. In large sections the exhibition was a complete feilure, and the reasons are there for all to

The extremest reactions at the d 5 were to Harald Szeemann's crazy, hrilllent one man programme with its highs and lows. These reactions were at least a judgement, a response, an opinion. The documenta 6 did not provoke any very extreme reactions."

The problem with this documents was the diversity of concepts. There were six working groups working parallel to one another, often against one another and each mostly uninterested in what the other was doing. Ever since its inception, the documen-

ts, has been based on the idea of con-sensus. In the case of the first four ex-hibitions, votes were taken to bring contrary opinions into some kind of com-mon line. In the case of d 5, one man ran, the whole show.

A documents which ababdons this concept of consensus loses its unity and Its cisim to set standards for quality. This is a fact, high attendance, records cannot disguise. Petra Kipphof ...

MEDICINE

12

Infant obesity – the cornerstone for future ailments

Tt must be assumed that the processes which in the course of a lifespan lead to heart and circulation discorders begin in the earliest of youth and possibly even in infancy.

As a result, prophylactic care against these ailments must not begin at the age of 20 or 30 but considerably earlier, namely during childhood.

As Professor Roif Grüttner, Hamburg, pointed out et the 74th Congress of the German Pediatric Society in Kiel, what matters primerily is an optimal composition of the diet and eating habits.

The attending pediatriciana listened with great interest since much of what Professor Grüttner explained in a concentrated form was new to them.

Highly concentrated baby food - and Professor Grüttner includes the socalled two-thirds milk in such a diet - leads to obesity in infancy unless it is enriched with vegetabic fats and carbohydrates.

This danger, which is not only attributable to non-adapted milk, is greatest in the first six weeks.

More than 20 per cent of the thus overfed infants show signs of obesity by the simple muitiplication of fat cells.

This is extremely bad since the newly formed fat cells cannot be broken down in later life. Chubby babies therefore retain their overweight in the years to come. The cornerstone for major nisk factors with rogsrd to heart and circulation disorders is thus laid in earliest in--fancy

The theory of the creation of new fat cells for the storing of excess fat is absolutely plausible though scientifically stili unproven. During the discussion in Kiel some

participants therefore pointed out that

A sound footing calls for early care

O ne in four children in the Federal Republic of Germany has deformed feet.

Orthopaedic experts pointed out at a congress of the Frankfurt Education Socioty for Orthopaedic Shoe Technology that it is above all the lack of prophylactic checkups and the minimising by parenta which cause minor foot deformations to develop into severe handi-

Professor Erich Schmidt of the Orthopaedic Department of the Frankfurt University Ciinic told the assembled 400 orthopaedic shoemakers from six European countries that the process of development in children aggravates hereditary deformations and that it leads to irparable foot damage. Regular prophy lactic checkups of infants and rigorous adherence to exercises prescribed by the doctor are of paramount importantance.

EN

P

According to orthopaedic shoe technologists, the number of prescribed orthopaedic footwear is increasing despite the fact that the number of those wearing such footwear as a result of war in turies is diminishing.

More than 300,000 pairs of such shoes and one miliion inner soles were made on doctors' prescriptions in 1976. dna (Ole Weil, 10 Ociober 1977)

there are essentially two different types of fst cells - only one of which can atore excess vegetable fat. But this particular type of cell is not yet fully developed in infants, and it is therefore questionable whether its development can be stimulated by more than ample diet.

On the other hand, the fat stored in infancy is broken down as time goes by. As a result, those who disagreed with Professor Grüttner argued that e health hazard is out of the question.

Disregarding the outcome of this medical controversy, there was consensus among the participating pediatricians that the diet and eating habits of infants should be given more attention in the future unless breast-feeding is given priority as a matter of principle.

Thus, for instance, it was pointed out that many mothers do not prepare the milk according to the prescribed formula but feed their children in a concentrated form.

As well es this might be meant in individual cases, it is a disservice to the infant due to the fact that its food intake exceeds the body's requirements especially when the mother insists that the bottle be emptied. in other words, the infant can thus be induced to become a glutton.

The risk of a wrong diet, primarily due to an excess intake of certain nutrients, is particularly great in the first few days after birth.

if, for instance, newly-borns are fed too much protein - the limit lies at about 3 grammes per kilo of weight this not only imposes an additional burden on the matabolism but also endangers the development of the brain.

Children given a protein-enriched diet from the very beginning generally put on weight faster. As bome out by recent tests, this is primarily due to the fact that such nutrition generally also contains a great many minerals. These minerals can be deposited in the cells of various tissues. But from a medical point of view, the only problematic element in this connection is simple cooking sait, since excess quantities promote the accumulation of water in the body. By increasing the volume of cells this process can finally lead to hypertension.

Thus, for instance, the salt intake of an infant through normal cow's milk is twice as great as in the case of breastfeeding.

Until recently, baby food manufacturers added salt to their products. Meanwhile, however, they have taken latest test results into account, and most of them no longer do so.

Today, pediatricians attribute the problem of sslt intake in infancy only to mothers who consider the taste of baby food too bland. if mothers find that their infant does not eat enough, they attribute this to the taste of the food and add sait in order to enhance it. In the interest of the child, this should be avoided - even though scientists have not yet clearly established that there is a connection between salt intake in infancy and hypertension in later life.

According to Professor Grüttner, prophylaxis against arteriosclerosis must also begin in infancy. Apart from overweight and hypertension, obesity is another major risk factor in connection with heart and circulation ailments.

But no-one throughout the world thinks of introducing a low-cholesterol diet although studies show that virtually one in two young men show clear signs of arteriosclerosis which must have been preceded by changes in the blood vessels. There is nothing to prove that all this is not attributable to eating habits in infancy.

In order to clarify this problem, said Professor Grüttner, it is most important to single out future risk patlents while they are still in their infancy. These must be sought primarily in families where high cholesterol has already led to heart trouble.

Even if the cholesterol levels in these children are still normal, they should nevertheiess undergo regular checkups since high cholesterol levels can occur in ister years as a result of genetic factors

Children from families with diabates elso number among the risk patients. They, too, must beware of obesity, and early dietetio and psychological counselling is indicated in their cases.

Just a few case histories brought up in Kiel demonstrated the extent to which diet and eating habits determine the future wellbeing of children.

if a child is not given a natural diet in infancy, prophylaxis against ailments - as for instance obesity, duodenal

No. 811 - 30 October 1977

The Eighth German Orlon taiists' L Conference ended on October 8 in Erlangen, and organisation committee director Wolfdletrich Fischer, Arabie this connection at the Kiel on specialist from Erlangen, can be well satisfied with the event. Five hundred and fifty orientalists spllt up into thirteen working groups spent five days discussing and consulting with one another and listening to lectures and analyses, no doubt with varying degress of attention.

Specialist conferences such as this are an impenotrable labyrinth for the layman. The only thing the specialist lectures, discussiona and consulatations seemed to have in common was that they sll dealt with the Orient.

The word 'Orient' in this context is very extensive in Its meaning: it includes all of Africa and all of Asia.

it is a familisr enough fact in the humanities that one academic may be studying strange things of which even collesgues studying tho same subject have not the remotest ldca. Nobody today has a general command of the very wide and vague subject area which goes under the name of "Oriental Studies." The author of this report has therefore confined himself to the area with which he is most familiar: German research on the Arabian Orlent.

Arabic specialist Professor Grotzfeld, who lives in Münster, lectured on the dialects of the east Lebanese Bekas plain and valloy; then Erlangen lecturer Otto lastrow spoke of vowels in tho dialect of the North Yenten Jiblah area.

The Oriental Studies faculties at the universities of Münster and Erlangen are the most important centres for research on Arabic dialects in the Federal Republic of Germany. Professor Grotzfeld gave a vivid description of difficulties Atabists encounter in their field work.

time

clock and

S

THE GERMAN TRIBUNE

EDUCATION Orientalists meet in Erlangen

immediately start asking the peasants questions about their village dialect, awkward aituations frequently arise.

The reason for this is that Asisns are more likely to become suspicious of a mysterious stranger than others. And even if the researchers manage to ovorcome this mistrust, another problem arises - suddenly no one in the village wanta to talk the dialect as soon as the dialectologists start using tapa recorders and microphones. The dialect of the next big city - from east Lobanon this would be Beirut or Damascus - is always considered more refined and elegant and the peasants try to speak it instead of their own normal dialect.

Highly specialised and dotailed analyses of narrow subject areas are essenial if we are to understand the language, history and art of the Oriental races.

in the scetlon on Semitic studies, Professor Fischer lectured on "that-clauses" with 'an' and 'anna' in Arabic. This was a classic example of academic specialisation.

Professor Fischer and his former student Jastrow have this year started a new course on "Modem Written Arabic" which uses modem langunge teaching

or some time now, parents and edu cationists have been concerned about the stress to which schoolchildren are subjected. A recent poll among schoolchildren shows that the talk of stress cannot simply be dismissed: far too many children are affected by serious problems which stem from school. Only one in six pupils, for example, feets that not too much is being asked of him at school.

More than one pupil in every three is afraid of being totd off by his or her parents for poor marks at school. Only thirty per cent of schoolchildren can do their homework on their own.

These findings are the result of a poll conducted by the "Aktion Humano Schule" (Campaign for Humane Schools) in Aalen near Stuttgart. This parents' groups, founded in Baden-Württemberg there years ago, now operates throughout the country. In its poli, the parents' group questioned about 1120 pupils in thirty eight classes in primary, secondary modern and grammar schools.

Eighty per cent of primary school children questioned said that thoy "enjoyed going to school." In the case of secondary schools, only 50 per cent of girls and boys could say tho same. The reasona they gave for their dislike of school were poor working stmosphere, increasing competition and ever greater pressure.

Sixty eight per cent of primary school children sald they liked the working at mosphere. In the tenth year of the secondary school (16 year olds) the corresponding figure was only 25 per cent. in the ninth class of the secondary modern school 15 yesr olds (Hauptschule) and the tenth grammar school (Gymnasann) class the figures were 19 and 8 per cent respectively.

The older children get, the less they ilke what thay are taught, in the second-piay such a big part here, in the tech-ary modern schools over a half of the nical high schools, too, about half of the pupils still approved of what they were pupils complained of the amount rhey

When they come into the village and methods to fscilitate the study of modem written Arable.

Professors Fischer and Hütteroth from Erlangen must also be given credit for a section on the "Modom Orient", in which there were a number of finc lectures on recent history and politica in the Middle East.

The German Orient Institute in Hamburg is the main specialist centre for tha study of Middla East politics at the moment. The publications this Institute has produced so far have been of varying quality. The instituta has published a number of first class works such as those by Friedrich-Wilhelm Fernau on orthodox churches in the East on the one hand, and financed more eulogies of Egyptian dictator Nasser on the other.

During the Lebancae civil war, tho Institute took the side of the radical Lebanese left and for Paleatinian terrorists. without even taking into account the opposite point of view - of the Lebanese Christians attacked by Palestinians.

At least the members of the Hamburg research centre, which is part of the "German Overseas Foundation" and independent of the University of Hamburg, express a point of view on current conflicts. This is in contrast to the atti-

tude of orientalists at most universities in this country, who have so far studiously avoided stating their point of view on any of the conflicts taking place in the Middle East at the moment.

Interest in the Arabic ianguage and Arabic dialects seems to be increasing at German universities at the moment. However, the Arabic faculties at this country's universities, whose task is to study the Arab-speaking East, seem to bo remote from the realities in these countries. How many German oriontalists, for instance, know tha "Montagne Inspirée" by Charles Corm, the national epic of the Maronites in Lebanon, printed in French and "translated from the Lebanese" as the motto to this astonishing work provocatively puts it?

Many of the academics at the confercnce would have said that there was no such thing as an officially recognised Lebaneso language if you asked them about this work, which was writton by the Lebanese writer Charles Corm in

And they would be right, formally at least. Lebanese does not exist as an officisl language - not yot. But soon - and naybe very soon, in a few years' time and certainly this century - Lebanese will be accepted as a new, expressive language alongsida Arabic, Hebrew, Perslan and Turkish.

This will come as quite a surprise to many an orientalist who has been sedulously studying narrow specialist areas since his youth and had no ldea of the huge linguistic volcano that was rumbling in the Schutte East. Harald Vocke.

(Frankfurter Allgemeine Zeitung für Deutschlund, 12 October 1977)

Stress at school overtaxes children

tanght, whereas among grammar and technical high school pupils the correpoulding figure was only about one

One of the most frequent complaints was that the material was not presented in a mannor which made it interesting to the pupils. This is a criticism which has to be considered in the light of grammar school teachers are too preoccontrast to primary school teachers, grammer school teachers are too preoccupied during their university careers with their specialist subjects and do not spend enough timo on educational, didactic and psychological aspects.

The pupils' answers to the question "Do you think you are under too-much pressuro at school?" provide consi-derable food for thought.

Only 15 per cent thought they were never under too much pressure; in the case of technical high school pupits, this figure was 8 per cent and for primary schoolchildren 25 per cent. In the ninth Hauptschule class only 12 per cent felt they could always cope, in the twelfth grammar school class the figure was only 10 per cent and in the tenth technical high school class only two per cent thought they were never under too

Pupils in the different kinds of schools gavo different reasons for why they were under too much pressure. One in four primary schoolcolldren contplained of the amount they had to lesm and one in five of the marking system. Secondary modern school pupils felt they had to much material to learn. The pressure of marks did not seem to

had to learn. It is only from the eight class onwards that about half the pupils felt there was too much emphasis on in arks. Grammar achool pupils in the twelfth class criticised pressure to get high marks most severely of sll (60 per cent of all 12th class pupils voiced this criticism).

One thing that seems to worry children in all schools far more than it should is the Klussenarbeir (class test). Only eight per cent of all pupils said they wero not worried about class tests. Splitting this figure according to kinds of school: in the primary school it was 20 per cent, in the secondary modorn school it was 11 por cent, in the technical high school 3 per cent and in the grammar school 6 per cent.

Pupils gavo a variety of reasons for their fear of class tests: half did not think they had enough time. One in three could not understand all the questions, and one in three was afraid of his parent's reaction if ho got poor marks.

Too much pressure at school -- and too much pressure aftor school. Aftor a long journey homo - the regrettable result of closing village schoola and bringing all the children in an schoolchildren still cannot just throw their booka in a corner and go out and play.

On average, 85 per cent of all pupils asked said they took up to two hours a day to do their homework (which means that about a half of pupils in all schools do a fuli eight hour day) Only a third can do their homework all on their own. Eighty per cent of primary achoolchildren need help with their homework; the figures for secondary modern school pupils is 65 per cent, for technical high school pupils 75 per cent and for grammar school pupils 57 per cent.

Ono of the few positive results of the poll: most of the older pupila help one another when they have difficulties.

SPACE RESEARCH

Spacelab candidate has his feet firmly on the ground

1254

here is aomething very ordinary about Dietmar Sengespeik's particuler way of savoire vivre.

The forty-year old test pilot of the Dutch/German sviation and space concern VFW-Fokker was interviewed by us at the Bremen Press Club. The photographer who was present would have liked to have had an opportunity for a particular and exciting shot. Unfortunat tely, he was disappointed and admitted quite frankly that he had "imagined a test pilot and a candidate for a apace mission to look somewhat different. This fellow looks as normal as you and

And, Indeed, that is about the best way to sum up Dietmar Sengespeik who stands 1.72 metres in his socks and weighs 136 lbs. His hiar is clearly thinning - but in all other ways he is in perfect physical condition, more so than virtually any other citizen of the Federal Republic of Germany.

There is noting to indicate a hero or adventurcr. And yet, ha is the minn on whom the limelight of public attention is concentrating more and more from day to day as lift-off day for Spacelab draws closer - the event which will for the first time send a West European into space.

W1 -

Of the 703 candidates In this country who were subjected to rigorous and sophisticated endurance tests extending over saveral weeks, flve men (and no woman) were chosen as potential erew membera.

They include four physicists and one mechanical engineer, namely Sengespeik. As paradoxical as this might sound, the fact that Sengespeik is a test pilot counts very little when it comes to propelling a man into space. A much more important factor is' the engineering background.

Says Dietmar Sengespelk: "Once the Spacelab programme 1s properly off the ground it will need neither pilots nor engioeers. What it will need is experimental physicists,"

Sengespelk then goes on to say: "Of more than 2,000 European candidates only 53 remained - 52 men and a French woman. This means that my chances of becoming a crew member of the first European space station are 'exactly one in 53."

And yet reality is somewhat different. A good dozen of the 53 candidates from the ten European countries belonging to the European Space Agency (ESA) the last word will in any event be spoken by Nasa in the United Statea have a considerably lesser degree of sclentiflo training. In other words, the five Germans emong them meet the highest of requirements ... or, to put It yet snother way, tha prospects of one of these five candidates becoming s crew member of Spacelab are excellent.

Granted, Herr Sengespeik keeps telling everybody that the first West European in space will have a doctorate in physics. But he also knows the problems involved in any scientific experiment, end tharefore he carefully concedes that he might nevertheless have somewhat better chances of taking part in the first space missions.

The space travel candidate, who has hed some 4,000 flying hours as a pilot (3,000 of them as a test pilot for VFW-Fokker, primarily in F 28 and VFW-Fokker 614 jets), knows that Space Shuttle, which is to be launched in 1980 will primarily serve tast purposes in the initial phases. "This,", he grants, "might give me an edge." What he means is the edge of a technician and project engi-

Proximity to the VFW-Fokker subsidiary Erno Space Technology, which has been commissioned 'to build Spacelab, has in no way influenced the Bonn Research Ministry in Its decision to commission the Deutsche Forschungsund 'Vorsuchsanstalt für Luft- und Raumfahrt (DFVLR) - the German Research and Test Institute for Aviation and Space Technology - and the Air Force's Institute for Aviation Medicine to carry out the necessary tests.

Dietmar Sengespeik's prospects of becoming Europe's number one in space leave him cold so far as the record is concerned. Says ho: "I have never in my life had the ambition to be the first st the South Pole or on the moon. But I would like to visit these places sometime."

He would forgo many personal advantages and would make do with less salary and with less free time if this would give him an opportunity to go to the moon or Mars or Venus.

His motivating force is the curiosity of the scientists for whom there are no taboos and no fixed frontiers.

Had Dietmar Sengespeik not become a test pilot - a job which fulfills him. incidentally - he would have chosen the career of a project engineer ... and this is indeed how his professional career began.

But he could just as well have become an ornithologist, a geologist or a paleontologist, since all these are professions which would have fascinated him.

His friends have nicknamed him the "stone hammarer". This is due to the fact that wherever he goes in the world he carries his geologist's hammer with him, No VFW 614, which Herr Senge-

inspection by prospective buyers, takes off without his hand luggaga containing the hammer. And whenever he returns from a vacation he carries an entire quarry in his luggage.

The man who considera flying at twice tha speed of sound as tha most wonderful thing of all is just as happy to wander around on foot and retrace the geological development of our earth.

Ha bagan his aviation training with the Bundeswehr in 1957. He was 20 at that time and flew, like all other trainees, Pipers and Plaggios. Subsequently he switched over to F 86

and Fiat G 91 jets. He schieved the rank of lieutenant

and became a flight control officer before leaving the Bundeswehr in 1964. At the age of 27 ha decided to study

mechanical engineering, graduating in 1968.

Although Dietmar Sengespeik had not forgotten how to fly in the meantime, he nevertheless lost all the necessary licences except for private sports aircraft. This was not enough for the project engineer at VFW-Fokker, who felt envious of people like Ludwig Obermeler - st that time Germany's most famous test ollot.

It was the head of VFW's testing department who "discovered" Sengespeik. He found that the 1.000 hours flying tima which Sengespeik had amassed hy then were simply too much to be left unutilised.

As a guest student at Lufthansa's school for commercial pilots in Bremen, he refreshed his knowledge and acquired a new commercial licence, including a licence for instrument flying. Subsequently, he was trained in Holland for the 27-passenger short-haul jet F 28.

Later ha flew as a co-pllot in Algerla and piloted flights, for the Shah of Iran the occasion of that country's 0n 2,500th anniversary. Says Herr Sengespeik: "Sometimes wa flew only a few TV films from Shiras to Theran and sometimes we flew royalty hack to Eu-

All this was followed by two and a half years of flying from Amaterdam to all parts of the world shoard the F28. The engineer thus turned into an experienced test pilot.

His special qualitites were quickly recognised by an expert. When the ESA was looking for suitable candidates Sengespeik did not think of Spacelab and even less of his own chances of hecoming part of it. And yet he was one of the few chosen from the 700-odd candidates.

Says he: "I really did not apply for

30 October 1977 -- No. 81

Incidentally, the 40-year old test in is irked by the first algas of a spare h around his midriff and looks like m thing but a superman.

It was a close friend of his it is DFVLR who pressed him to apply h the Spacelab . joh . Ha. did. so when h hannened to be in Cologne, saying h himself that it could do no ham t have a shot at It.

The psychological and . phil hurdles were in no way daunling h him. Having undergone similar tests fore, he falt virtually at hame at theb stituta for Aviation Medicine and siz DFVLR.

As he puts It: "I was batter preput for it then many other candidates. It physical anduranca tests which all an didates had to undergo - such a weightlessness, multiple gravity and heart and circulation tests under extreme conditions - arc part of normal routing for me."

Triple gravity as achieved in the centrifuge of the DFVLR is nothing news the engineer-test pilot, who is obviously familiar with the laws of gravity, or is he unfamiliar with the practical effet of such tests.

Only the famous "Snowhite Colli provad a bit troublesome even h Dietmer Sengespaik. This is a transfe ant plastic pressure cabin in which il candidates are tested as to their circle tion's ability to cope with normal tents trial conditions after an extended pend of weightlessness. The reduced pressuit causes the blood to flow into the love parts of the hody, withdrawing up is two litres from the upper body.

Dietmar Sengespeik passed all the tests with flying colours. He and his its ters were essentially agreed that he "professional qualities" were of relatively littla value since, as opposad to Amer can astronauts who frequently pilot the dwn craft in space, Spacelab crews we do virtually only scientific work.

Only absolutaly healthy scleatist, n tallar than 1.90 melres, free of handid right down to the little tos and without fillings in their teeth; circulation prob lems or spectacles hut with full unive ty training in one of the sciences and a excellent knowledge of English, called for. Dietmar Sengespeikimeets these qualifications light down in smallest detail.

What excites him most is the propect of one day being ahle to make us of his geologist's hammer somewher apsce. As his puts it: "Knocking on stor on the moon or on Mars would be the actly what I've been longing for."

In the final analysis, out space can date is shove all a geologist, and the pilot will remain grounded.

SPORT

Small family cruiser dominates Hamburg Boat Show

The smbitton to own one's own little show in Hamburg costs 850,000 deboat seems to be as strong as ever. This is the impression one gets from tha 18th International Boat Show which opened recently in Hamburg. 9.000 axhibitora from 27 European countries are displaying 1,200 boats of all shapes and sizes plus s large selection of accessories as they compete for tha custom of Germany's many yachtsman.

The Garman boathuilding industry has mada considerable progress in the last few years and has won hack a lot of ground from foreign competitors. Its urnover last year was about DM180 million. However, foreign boatbuilders schieved at lesst the same tumover on the German market and they also outnumber German manufacturers at the

Although there are few free mooring places on the coast or on Inland waters, the exhibitors are still hoping for high sales figures. Statistica tall us that there is anly one beat to every 228 peopla in this country. In this respect, the Federal Republif of Germany can be considered an underdeveloped country. And this is probably the reason why the USA and lustralla are, for the first time, represented with big national exhibits.

Visitors and yachtsman who stroll around the show this year may have to rethink their plans. There are a lot of new boats and accessories on display -. One noticeabla festure was the increase in the number of large, occan-going yachts ranging from 12 to 14 matres in length. Long voyagas and even trips round the world would be no problem at all in these vessals. Several of these yachts are on display for the first time ever in Hamburg, including tha new Swan 411 from Finland, which is as streamlined and elegant as its illustrious predecessors.

There are a lot of new hoats from England, Holland, France, the Scandinavian countries and - for the first time in many years - from this country. Most of these hig yachts are so equipped that they can be sailed hy a crew of ten or a two-man crew.

There is plenty of space below deck, even for a larger crew. Everything has been done to ensura maximum comfort furnitura from high quality wcod, deap freeze grill, showers with hot water. Price: from 250.000 deutschmarks. The

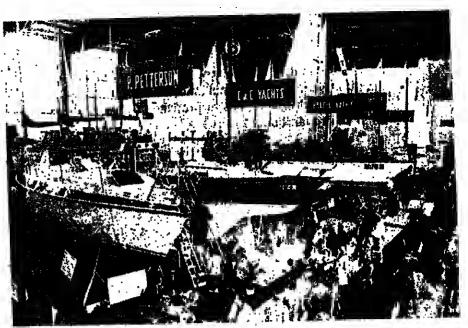

utschmarks. The small and medium sized boats indicate another trend: the family hoat from 6.5 to 9.6 metres long, for sailing in coastal waters. These boats sell exceptionally well, as thay have dono in previous years. The designs are practical and well thought out. There is plenty of room for two or three children on a weekend sailing trip. Prices have gone up by an average of four per cent this year - in the case of smalter boats this increase is frequently difficult to understand. Large boat producars have had the clever idea of describing indispensable equipment as "extras" and, of course, charging extra for It. This means that a DM25.000 boat in the lowest price range is often no more than a plastic shell with a mast and a ruddar. You have to pey another DM25,000 for necessary equipment hafore this shell

I ang gliding — "a new dimension of flying" — has rapidly been gaining in popularity ever since American ace Mike Harker did a spectacular demonstration flight from the Zugspltze, Germany's highest mountain, in 1973.

Before this there were comparatively faw hang gliders hera. Recent estimates, however, show that the numbers have doubled, from 5,000 to 10,000, this year

headlines about fatal accidents Big have alarmad hang gliders recently and made them wonder how long they will ba ahla to practise this sport unimpeded by legal restrictions. Munich hang gllding instructor Klaus Tänzler, who represents the interests of hang gliders in the DAEC (Garman Aero Club) has saverely criticised tha fact "that just about anyone can put a hang glider together at home and sell it for others to fly in."

An Augsburg manufacturer told me that glider makers had no need to fear claims for damages unless they had acted with extreme negligence and against standard principles of construction." This manifacturer's high performance glider has been banned by the South Bavarian Aviation Office hut this muat he seen as a mere verbal gesture, especially when one considers that there is no way of warning potential filiera be-; sdopted the practice of taking off from

the safety of ship and crew when pulpit, anchor and lights are dascribed

"When Garman made hang gliding craft crash in Austris or Switzerland, it docs not occur to the German outhorties to draw the consequences" says the Augsburg manufacturer. In his opinion most designers are mainly interested in making the gliding craft as light as possible - some weigh as little as 25 kilogrammes. Given this development, he aska pllots what is tikety to break first when there is air turbulence in the mountains, as quite frequently happens: the span wires which used to ba four millimetres thick and are now only 2.5 millimetres, or the crossbars.

Many hang gliding pilots reckon that it is high time there were legal regulations on this sport. The Aviation Office does not consider the regulations which the Federal Transport Ministry ia to bring out next year a great help.

Director Dr. Christian Lieberknecht said that the urgently needed law on glider training and state glider licences was unlikely to be passed, and the same applied to official tests and seals of approval on the hang gliding craft themselves. He pointed out that both gliding tests and state approval had long been legal requirements in the case of parachutes, which where not as easy to manoeuvre as hang gilders.
